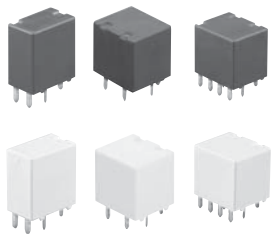
COMPACT SLIM TWIN AND SINGLE TYPE AUTOMOTIVE RELAY

CJ RELAYS (ACJ)



FEATURES

- **It is extremely compact at approx. 2/3 the size of previous products.**
  Compared to our previous miniature type CT relay, both the 1 Form C and 10-pin and 8-pin twin types take up approx. two-thirds the space and volume. This makes them ideal for relay unit miniaturization.
- **Compact and high-capacity 25 A load switching**
  High capacity control is possible while being compact and capable of motor lock load switching at 25 A, 14 V DC.
- **Pin in Paste* compatible model added**
  Models compatible with the recently increasing Pin in Paste technique (reflow solder mounting) have been added.
  Pin in Paste compatible models are the flux tight type.
  * The Pin in Paste method may sometimes be referred to as THR (Through-hole Reflow).
- **Environmental protection specifications**
  Cadmium-free contacts and use of lead-free solder are standard. Environmental pollutants are not used.

TYPICAL APPLICATIONS

- **Powered windows**
- **Automatic door locks**
- **Electrically powered mirrors**
- **Powered sunroofs**
- **Powered seats**
- **Lift gates**
- **Smart J/B related products, etc.**

Conditions	Conditions for operation, transport and storage*2		Ambient temperature: –40°C to +85°C –40°F to +185°F Humidity: 5% R.H. to 85% R.H. (Not freezing and condensing at low temperature)
	Max. operating speed		6 cpm (at nominal switching capacity)
Mass			1 Form C type: approx. 3.5 g .12 oz, Twin type: approx. 6.5 g .23 oz

Notes:
*1. This value can change due to the switching frequency, environmental conditions, and desired reliability level, therefore it is recommended to check this with the actual load.
*2. The upper operation ambient temperature limit is the maximum temperature that can satisfy the coil temperature rise value. Refer to “6. Usage, Storage and Transport Conditions“ in AMBIENT ENVIRONMENT section in Relay Technical Information.
Please inquire if you will be using the relay in a high temperature atmosphere (110°C 230°F).
*3. Depends on connection conditions. Also, this does not guarantee repeated switching. We recommend that you confirm operation under actual conditions.
∗ If the relay is used continuously for long periods of time with coils on both sides in an energized condition, breakdown might occur due to abnormal heating depending on the carrying condition. Therefore, please inquire when using with a circuit that causes an energized condition on both sides simultaneously.

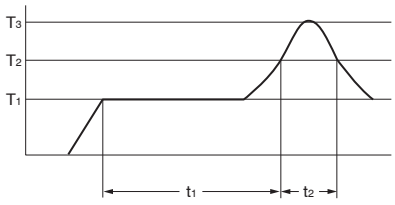
NOTES

Assembly and cleaning conditions for Pin-in-Paste type

1) Example of the recommended conditions for automated assembly is shown below.

• Temperature profile during reflow-soldering (Recommended)



T_1 = 150 to 180°C 302 to 356°F
T_2 = 230°C 446°F or more
T_3 = Less than 260°C 500°F
t_1 = 60 to 120 sec.
t_2 = Less than 40 sec.

• Cautions for mounting

Temperature rise of relay itself may vary according to the mounting level or the heating method of reflow equipment. Therefore, please set the temperature of soldering portion of relay terminal and the top surface of the relay case not to exceed the above mentioned soldering condition. It is recommended to check the temperature rise of each portion under actual mounting condition before use.

2) Cleaning or coating should be avoided. Because “Pin-in-Paste” type is not a sealed type. Also, use caution for avoiding penetration of soldering flux into the interior of the relay.
