Absolute Maximum Ratings (Notes 4 & 5)

Symbol	Description	Rating	Unit

T_{STG}	Storage Temperature	-65 to +150	°C
P_D	Total Power Dissipation (Note 6)	250	mW

Notes:
4. Stresses beyond the absolute maximum can result in immediate failure or reduced reliability. These are stress values and device operation should be within recommend values.
5. Forcing the maximum allowed voltage could cause a condition exceeding the maximum current or conversely forcing the maximum current could cause a condition exceeding the maximum voltage. The ratings of both current and voltage must be maintained within the controlled range.
6. This will need to be derated at higher operating temperatures to prevent exceeding maximum T_J. Refer to package thermal characteristics section.
