Notes:

- 8. Top Marking: Y denotes manufacturing origin and XXXX denotes manufacturing lot number. The value of “Y” will depend on the assembly location of the device.
- 9. A capacitor of value 0.1 μ F or higher between Vdd and GND is required. An additional 10 μ F capacitor between Vdd and GND is required for the best phase jitter performance.
- 10. The center pad has no electrical function. Soldering down the center pad to the GND is recommended for best thermal dissipation, but is optional.

Marking Specification

The marking contains two lines of information. The first line indicates the frequency, operating voltage and signaling type of the device. The second line is the trace code that includes the assembly location and lot number. This marking option is selected by entering an “M”, “V”, “Z”, “H” or “J” (“T”, “Y”, “D” or “E”) as the last digit of the ordering part number depending on the packing method required.

Figure 16. 7050 and 3225 packages 2-line marking

Line 1:

The number of characters for frequency shown in the top mark is limited by package size. The line 1 marking for each package size is shown in the table below.

Table 10. The first line of the mark for different frequencies with examples

Device Size (mm x mm)	# of characters	Example for <10 MHz	Example for <100 MHz	Example for >100 MHz
7.0 x 5.0	5	X.XVL	XX.VL	XXXVL
3.2 x 2.5	5	X.XVL	XX.VL	XXXVL

The alpha characters “VL” in the top mark XXXVL specify the operating voltage and the output signaling type of the device.

“V” can have one of the following values.

- A = 3.3 V
- B = 2.8 V
- C = 2.5 V
- D = 1.8 V

“L” can have one of the following values.

- B = LVPECL
- C = LVDS
- E = HCSL

Line 2:

The alpha character “Y” in the top mark YXXXX specifies the assembly location and can have one of the following values depending on the assembly location of the device.

“Y” can have one of the following values.

- A = Carsem, Malaysia
- B = UTAC, Thailand
- C = ASE, Taiwan

“XXXX” indicates the last 4 alphanumeric characters of the device lot code.
