Product Description

Quickly add Grove modules to your PYNQ projects with a choice of a Grove Shield or a Grove Adapter. The Grove system simplifies traditional electronics by removing the messy, time-consuming effort with breadboarding. The Grove system consists of a base platform and various modules with standardized connectors. Each Grove module addresses a range of functions such as simple LEDs, buttons, switches to complex servo control, heart rate sensors functions, etc. With the combination of PYNQ and Grove modules, the project possibilities are endless! For more information on the Grove system, please visit [SEEDStudio](#).

For support for these boards and PYNQ projects, please visit [www.pynq.io](#)
