

PROTECTION PRODUCTS - MicroClamp™

Description

The μClamp™ series of TVS arrays are designed to protect sensitive electronics from damage or latch-up due to ESD. They are designed for use in applications where board space is at a premium. Each device requires less than 2.9mm² of PCB area and will protect up to five lines. They are bidirectional devices and may be used on lines where the signal polarities swing above and below ground.

TVS diodes are solid-state devices designed specifically for transient suppression. They feature large cross-sectional area junctions for conducting high transient currents. They offer desirable characteristics for board level protection including fast response time, low operating and clamping voltage, and no device degradation.

These devices may be used to meet the immunity requirements of IEC 61000-4-2, level 4. The small SC89 package makes them ideal for use in portable electronics such as cell phones, PDAs, notebook computers, and digital cameras.

Features

- ◆ Transient protection for data lines to **IEC 61000-4-2 (ESD) ±15kV (air), ±8kV (contact)**
IEC 61000-4-4 (EFT) 40A (5/50ns)
- ◆ Protects five bidirectional I/O lines
- ◆ Ultra-small SC-89 package (**1.7 x 1.7 x 0.6mm**) requires less than 2.9mm² of PCB area
- ◆ Working voltage: 5V
- ◆ Low leakage current
- ◆ Low operating and clamping voltages
- ◆ Solid-state silicon-avalanche technology

Mechanical Characteristics

- ◆ SC-89 (SOT-666) package
- ◆ RoHS / WEEE Compliant
- ◆ Molding compound flammability rating: UL 94V-0
- ◆ Marking : Marking Code and pin 1 indicator
- ◆ Weight: 2.9mg (typical)
- ◆ Packaging : Tape and Reel per EIA 481

Applications

- ◆ Cellular Handsets and Accessories
- ◆ Cordless Phones
- ◆ Notebooks and Handhelds
- ◆ Portable Instrumentation
- ◆ Digital Cameras
- ◆ Peripherals
- ◆ MP3 Players

Applications Information

Device Connection for Protection of Five Data Lines

These devices are designed to protect up to five biidirectional data lines. The device is connected as follows:

1. Bidirectional protection of five I/O lines is achieved by connecting pins 1, 3, 4, 5, and 6 to the data lines. Pin 2 is connected to ground. The ground connection should be made directly to the ground plane for best results. The path length is kept as short as possible to reduce the effects of parasitic inductance in the board traces.

Circuit Board Layout Recommendations for Suppression of ESD.

Good circuit board layout is critical for the suppression of ESD induced transients. The following guidelines are recommended:

- Place the TVS near the input terminals or connectors to restrict transient coupling.
- Minimize the path length between the TVS and the protected line.
- Minimize all conductive loops including power and ground loops.
- The ESD transient return path to ground should be kept as short as possible.
- Never run critical signals near board edges.
- Use ground planes whenever possible.
