#### PCB terminal block, 253 Series, PUSH WIRE®

This PCB terminal block (item number 253-104) is designed for quick and easy connections. It is perfect for custom installations with different mounting types. Rated current and voltage are key factors to consider when choosing a PCB terminal block, as they indicate possible applications and uses. This product has a rated voltage of 320 V and a rated current of 17.5 A, making it suitable for high-load applications. Conductors should only be connected to this PCB terminal block if their strip length is between 8.5 mm and 9.5 mm. This product features two conductor terminals and utilizes PUSH WIRE® as well as PUSH WIRE®. Our tried-and-tested PUSH WIRE® connection offers the fastest method for clamping conductors. It utilizes the conductor's stiffness to overcome the clamping spring's contact force. The dimensions are 22 x 16.6 x 12.8 mm (width x height x depth). Depending on the type of conductor, this PCB terminal block is suitable for conductor cross sections ranging from 0.5 mm<sup>2</sup> to 1.5 mm<sup>2</sup> on one side and for conductor cross sections from 0.5 mm<sup>2</sup> to 1.5 mm<sup>2</sup> on the other side. It comes with one level and eight clamping points that you can use to connect four potentials / 4 poles. The gray housing is made of polyamide (PA66) for insulation, the contacts are made of electrolytic copper (ECu), and the clamping spring is made of chrome-nickel spring steel (CrNi). The contact surface is coated with tin. This PCB terminal block is operated with an operating tool. THT is used to assemble the PCB terminal block. The conductor is designed to be inserted at an angle of 0°.. The solder pins, which are 0.5 x 0.8 mm in cross-section and 3.6 mm long, are arranged over the entire terminal strip (staggered). There are one solder pin per potential.
