

# AFE7906 6-Channel, 5MHz to 12GHz RF Sampling Receiver with 3GSPS ADCs

## 1 Features

- [Request full data sheet](#)
- Six RF sampling 14 bit, 3GSPS ADCs
- Maximum RF signal bandwidth:
  - 4 ADCs: 1200MHz per ADC
  - 6 ADCs: 600MHz per ADC
- RF frequency range: 5MHz - 12GHz
- Digital step attenuators (DSA): 25dB range, 0.5dB steps
- Single DDC (on 6 channels) or dual-band DDCs (on 4 channels)
- 16x NCOs per DDC channel
- Optional Internal PLL/VCO for ADC clocks or external clock at ADC sample rate
- Sysref alignment detector
- SerDes data interface:
  - JESD204B and JESD204C compatible
  - 8 SerDes transmitters up to 29.5Gbps
  - Subclass 1 multi-device synchronization
- Package: 17mm × 17mm FCBGA, 0.8mm pitch

## 2 Applications

- Radar
- Seeker front end
- Defense radio
- Wireless communications test

## 3 Description

The AFE7906 is a high performance, wide bandwidth multi-channel receiver, integrating six RF Sampling ADCs. With operation up to 12GHz, this device enables direct RF sampling in the L, S, C and X-band frequency ranges without the need for additional frequency conversions stages. This improvement in density and flexibility enables high-channel-count, multi-mission systems.

Each receiver chain includes a 25dB range DSA (Digital Step Attenuator), followed by a 3GSPS ADC (analog-to-digital converter). Four receiver channels have an analog peak power detector and various digital power detectors to assist an external or internal autonomous automatic gain controller, and RF overload detectors for device reliability protection. Flexible decimation options provide optimization of data bandwidth up to 1200MHz for four RX or 600MHz.

The device contains a SYSREF timing detector to allow optimization of the SYSREF input timing relative to the device clock.

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under [Recommended Operating Conditions](#). Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

### 4.2 ESD Ratings

		VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins <sup>(1)</sup>	1000
		Charged device model (CDM), per ANSI/ESDA/JEDEC JS-002, all pins <sup>(2)</sup>	150

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process. Manufacturing with less than 250-V CDM is possible if necessary precautions are taken.

## 5 Device and Documentation Support

### 5.1 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on [ti.com](#). Click on *Notifications* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

### 5.2 Support Resources

[TI E2E™ support forums](#) are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

### 5.3 Trademarks

TI E2E™ is a trademark of Texas Instruments.

All trademarks are the property of their respective owners.

### 5.4 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

## 6 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from June 1, 2023 to May 1, 2025 (from Revision C (May 2023) to Revision D (May 2025))	Page
• RX Input Max Power moved from RF ADC Electrical Characteristics to Absolute Maximum Ratings.....	4

---

Changes from July 9, 2022 to May 30, 2023 (from Revision B (July 2022) to Revision C (May 2023))	Page
• Changed the Device Information to <i>Package Information</i> table.....	1
• Changed $I_{IH}$ and $I_{IL}$ units to $\mu A$ .....	14

---

Changes from March 11, 2022 to July 8, 2022 (from Revision A (March 2022) to Revision B (July 2022))	Page
• Deleted ABJ from the <a href="#">Thermal Information</a> table. The table applies to both ABJ and the ALK packages.....	4
• Changed 0RX - 3RX to 1RX - 4RX in several plots.....	44
• Changed 0RX - 3RX to 1RX - 4RX in several plots.....	49

---

Changes from Revision * (January 2022) to Revision A (March 2022)	Page
• Added Feature to Request the full data sheet.....	1
• Added the Specification tables to the data sheet.....	4
• Changed Power Mode 4 to $f_{RX} = 2.25$ GHz.....	15
• Added the Typical Characteristics section to the data sheet.....	19

## 7 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

<sup>(1)</sup> **Status:** For more details on status, see our [product life cycle](#).

<sup>(2)</sup> **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

<sup>(3)</sup> **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

<sup>(4)</sup> **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

<sup>(5)</sup> **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

<sup>(6)</sup> **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

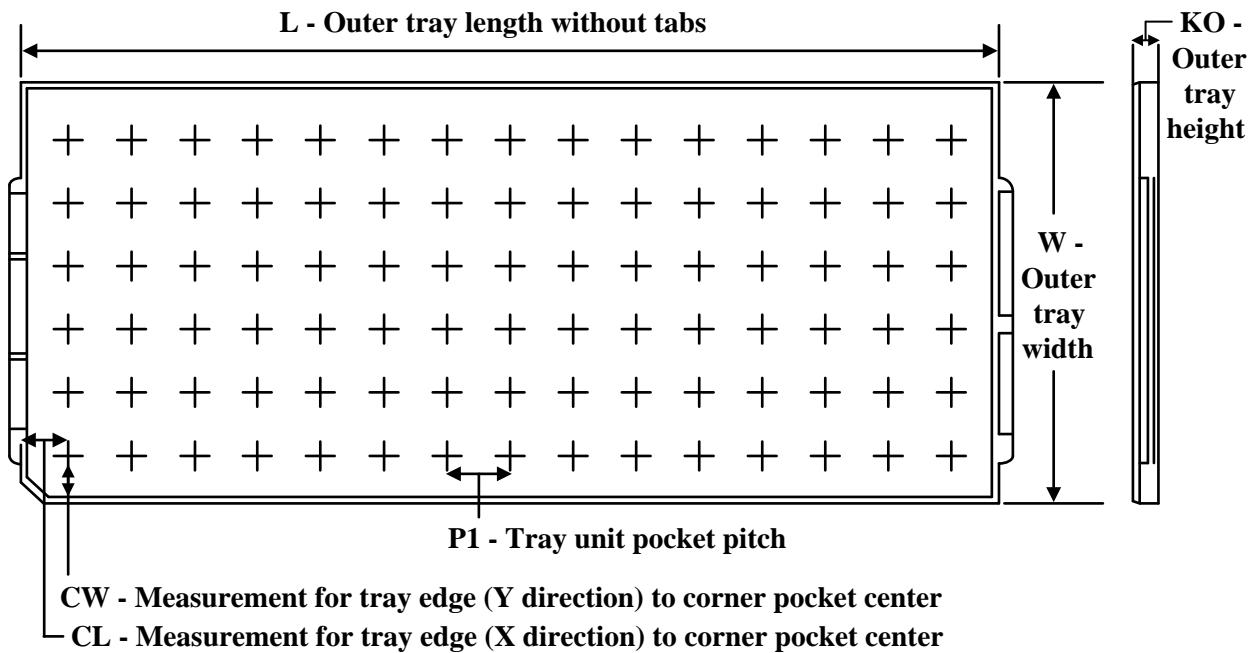

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a " ~ " will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

## NOTES:

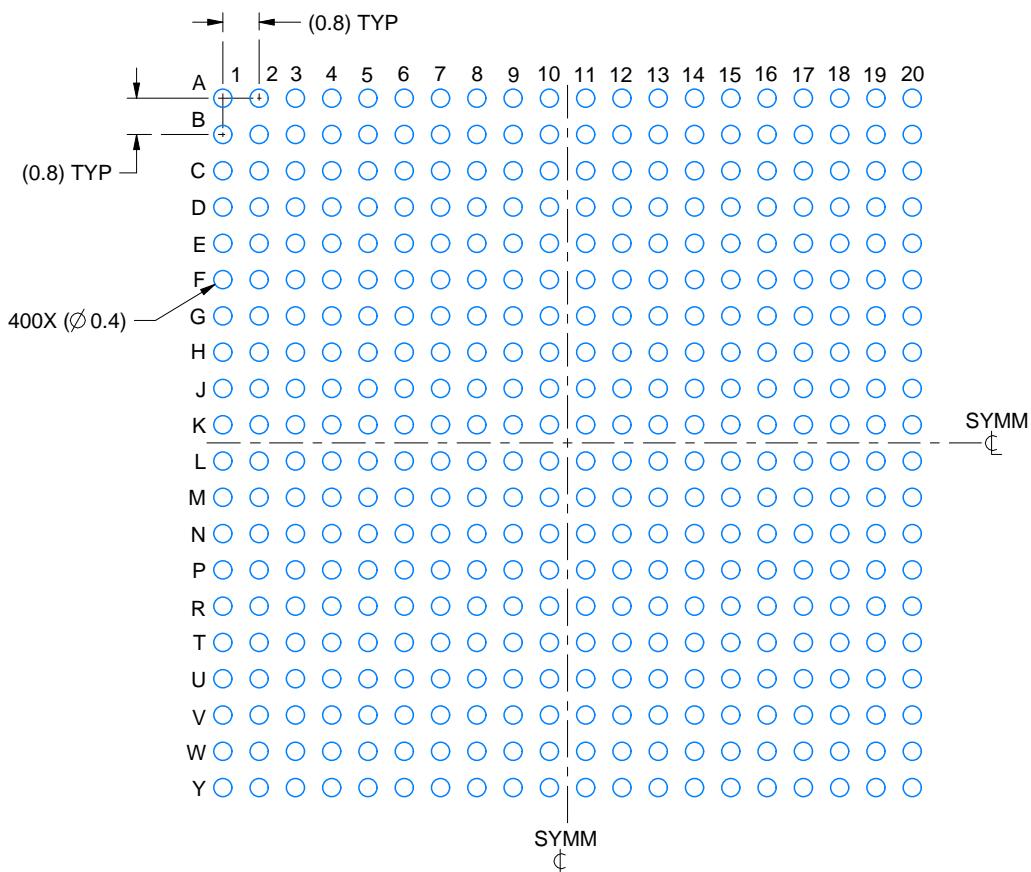

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. Dimension is measured at the maximum solder ball diameter, parallel to primary datum C.
4. Primary datum C and seating plane are defined by the spherical crowns of the solder balls.
5. The lids are electrically floating (e.g. not tied to GND).
