PCB terminal block, 2061 Series, with 6 mm pin spacing

Our PCB terminal block (item number 2061-622/998-404) is the ideal way to connect conductors quickly and securely. It is a universal connector that can be used practically anywhere, e.g., as a pluggable PCB connector, panel feedthrough header, connector for rail-mount terminal blocks, or a floating connector for different mounting methods. Rated current and voltage are key factors to consider when choosing a PCB terminal block, as they indicate how the product can be used. This product has a rated voltage of 320 V and a rated current of 17.5 A, making it suitable for high-load applications. Strip lengths must be between 7 mm and 10 mm when connecting conductors to this PCB terminal block. This product features one conductor terminal and utilizes Push-in CAGE CLAMP®. Push-in CAGE CLAMP® connection technology is ideal for connecting all conductor types. Solid and fine-stranded conductors with ferrules can be plugged in without the need for tools—all thanks to its pluggable design. The dimensions are 11.7 x 5.6 x 15.8 mm (width x height x depth). This PCB terminal block is suitable for conductor cross sections ranging from 0.25 mm² to 1.5 mm². It has one level. Two potentials can connect two poles using the two clamping points The contacts are made of copper alloy and the black housing is made of polyphthalamide (PPA GF) for insulation. The contact surface is coated with tin. A push-button is used to operate this PCB terminal block. The PCB terminal block is designed for SMD soldering. Insert the conductor into the board at an angle of 0°..

Notes

Note	Application notes: Suitable for lead-free, reflow-soldering profiles per DIN EN 61760-1 and IEC 60068-2-58 up to max. 260°C peak temperature. Due to application-specific variables (component configuration and orientation, type of soldering machine, solder paste), trial runs are recommended to ensure product and process compatibility under actual manufacturing conditions. Depending on reflow soldering temperatures and times, color deviations may occur. These deviations will have no impact on functionality.
Recommendation	Recommendation for stencil: 150 µm material thickness; Pattern layout identical to solder pad layout
