

IW612

1x1 Dual-band Wi-Fi 6, Bluetooth 5.4 and 802.15.4 Tri-radio Solution

Rev. 7.0 — 20 March 2025

Product data sheet

1 Product overview

The IW612 is a highly integrated 2.4/5 GHz dual-band 1x1 Wi-Fi 6, Bluetooth/Bluetooth Low Energy 5.4 and 802.15.4 tri-radio single-chip solution optimized for a broad array of IoT and industrial applications in smart home, smart devices and accessories, smart appliances, smart energy, industrial automation, gateways and many more. This high degree of integration contributes to very low system costs and a minimum external BOM while achieving efficient co-existence between all internal radios as well as external radios.

IW612 includes a full-feature Wi-Fi subsystem powered by NXP's 802.11ax (Wi-Fi 6) technology bringing higher throughput, better network efficiency, lower latency and improved range over previous generation Wi-Fi standards. The Wi-Fi subsystem integrates a Wi-Fi MAC, baseband, and direct-conversion radio with integrated PA, LNA, and transmit/receive switch removing the need for an RF front end module (FEMs), saving cost, and reducing system complexity.

In addition to a Wi-Fi 6 radio, the IW612 integrates an independent Bluetooth 5.4 and 802.15.4 subsystem that supports Thread and Zigbee mesh networks. The device features Bluetooth Profiles such as hands free (HFP), advanced audio distribution profile (A2DP) for audio streaming as well as additional profiles like dual wide band speech (WBS). For Bluetooth Low Energy, the IW612 enables 2 Mbit/s high speed data rate, long range, and extended advertising. Finally, LE Audio feature is supported utilizing isochronous channels for a better overall audio experience.

The Tri-radio capability of the IW612 makes it an ideal device for Matter applications running over Wi-Fi and/or Thread. The IW612 can operate as a Matter Controller as well as Thread Border Router. This capability enables full Matter functionality for both local and cloud-based control, and monitoring of IoT products seamlessly across major ecosystems. In addition to Thread, the 802.15.4 radio on the IW612 can also support Zigbee and is ideal for Zigbee bridges, connecting Zigbee devices to cloud systems or IP based networks like Matter.

The IW612 supports two front-end antenna configurations: single-antenna ([Figure 1](#)) and dual-antenna ([Figure 2](#)). Read more about the single and dual antenna configurations in [Section 6](#).

The IW612 integrates dedicated CPUs and memories for both the Wi-Fi and Bluetooth/802.15.4 subsystems which enable real time, independent protocol processing. Interfaces for connecting the IW612 to external host processors include SDIO 3.0 for Wi-Fi, UART for Bluetooth and SPI for 802.15.4.

Figure 1 shows the application diagram for the single-antenna configuration.

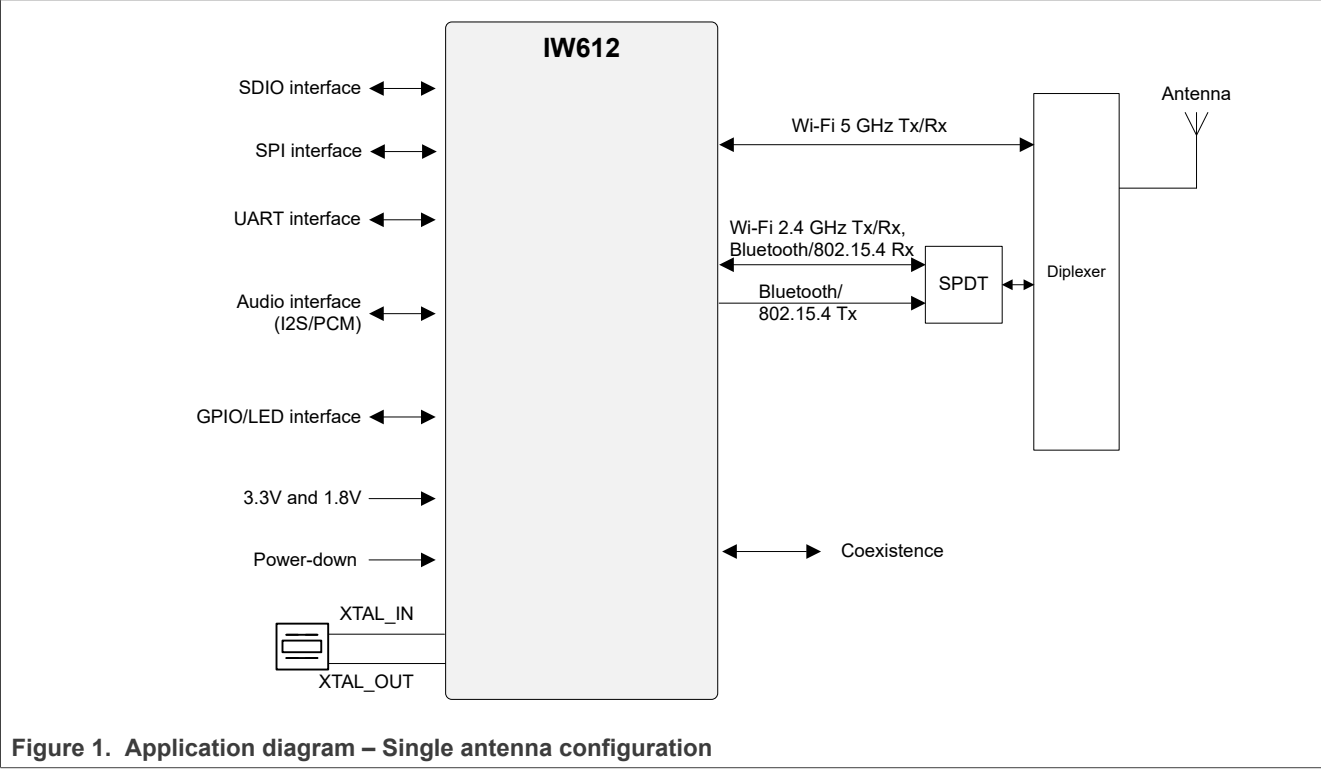

Figure 1. Application diagram – Single antenna configuration

Figure 2 shows the application diagram for the dual-antenna configuration.

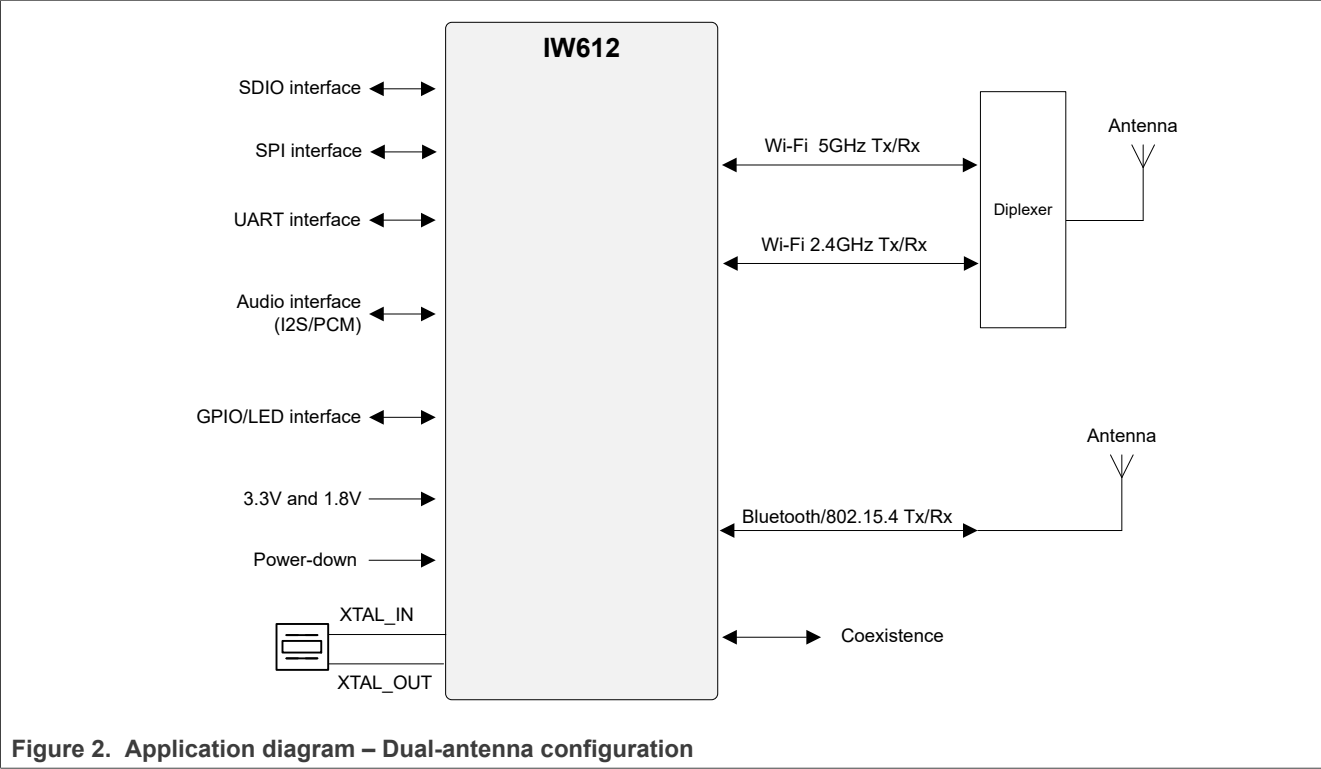

Figure 2. Application diagram – Dual-antenna configuration

1.1 Applications

- Smart entertainment — Smart speaker, smart display, streaming/OTT device, smart television
- Gateways/hubs/bridges — Voice assistant front-end, Matter controller and Thread border router, and other radios to Wi-Fi/IP network
- Smart home — Control panel, security system, thermostat, sprinkler controller, security camera, garage door controller, smart outlet, light switch, smart doorbell, smoke alarm/CO detector
- Industrial — Building automation, smart lighting, Wi-Fi to other radio bridge, point of sale (POS) terminal
- Smart appliances — Refrigerator, washer, dryer, oven range, microwave, dishwasher, water heater, air conditioner, coffee pot, rice cooker, vacuum cleaner, air purifier

1.2 Wi-Fi key features

- IEEE 802.11a/b/g/n/ac/ax, 1x1 SISO 2.4 GHz and 5 GHz, up to 80 MHz channel bandwidth
- Peak data rates up to 480 Mbps
- Integrated high power PA up to +21 dBm transmit power
- Integrated LNA and T/R switches
- UL/DL OFDMA, UL/DL MU-MIMO (station only)
- 802.11ax TWT (station only)
- 802.11ax ER, DCM
- WPA2 and WPA3 personal and enterprise security
- Support for Matter over Wi-Fi
- Simultaneous receive with Bluetooth and 802.15.4
- Antenna diversity

1.3 Bluetooth key features

- Supports Bluetooth 5.2 (Class 1/Class 2) and Bluetooth Low Energy features
- Bluetooth 5.4 certified
- Integrated high power PA up to +19 dBm transmit power for Bluetooth LE and BDR^{1,2,3}
- Integrated high power PA up to +10 dBm transmit power for EDR
- BDR/EDR packet types—1 Mbps (GFSK), 2 Mbps ($\pi/4$ -DQPSK), 3 Mbps (8DPSK)
- Bluetooth LE long range (125/500 kbps) support
- Bluetooth LE 2 Mbps
- Bluetooth LE advertising extensions for improved capacity
- Isochronous channels (ISOC) supporting LE Audio and Auracast™ Broadcast Audio
- Shared TX/RX pin with 802.15.4
- Simultaneous receive with Wi-Fi and 802.15.4

1 Meets the Bluetooth SIG requirement of maximum power difference between GFSK and QPSK portions of the EDR packet to less than 10 dB.

2 The maximum TX power is limited to 14 dBm for Bluetooth LE Long Range packets.

3 The maximum TX power is 18 dBm for Bluetooth LE 2 Mbps for 2480 MHz channel.

1.4 802.15.4 key features

- IEEE 802.15.4-2020 compliant supporting Thread and Zigbee in 2.4 GHz band
- Integrated high power PA up to +21 dBm transmit power
- Shared TX/RX pin with Bluetooth
- Simultaneous receive with Wi-Fi and Bluetooth
- MAC accelerator with packet formatting, CRCs, address check, auto-acks, timers

1.5 Host interfaces

Wi-Fi, Bluetooth, and 802.15.4 interface options

1.6 Operating characteristics

- Supply voltage: 1.8V and 3.3V
- Operating temperature
 - Commercial: 0 to 70°C
 - Industrial: -40 to 85°C
- Storage temperature: -55 to 125°C

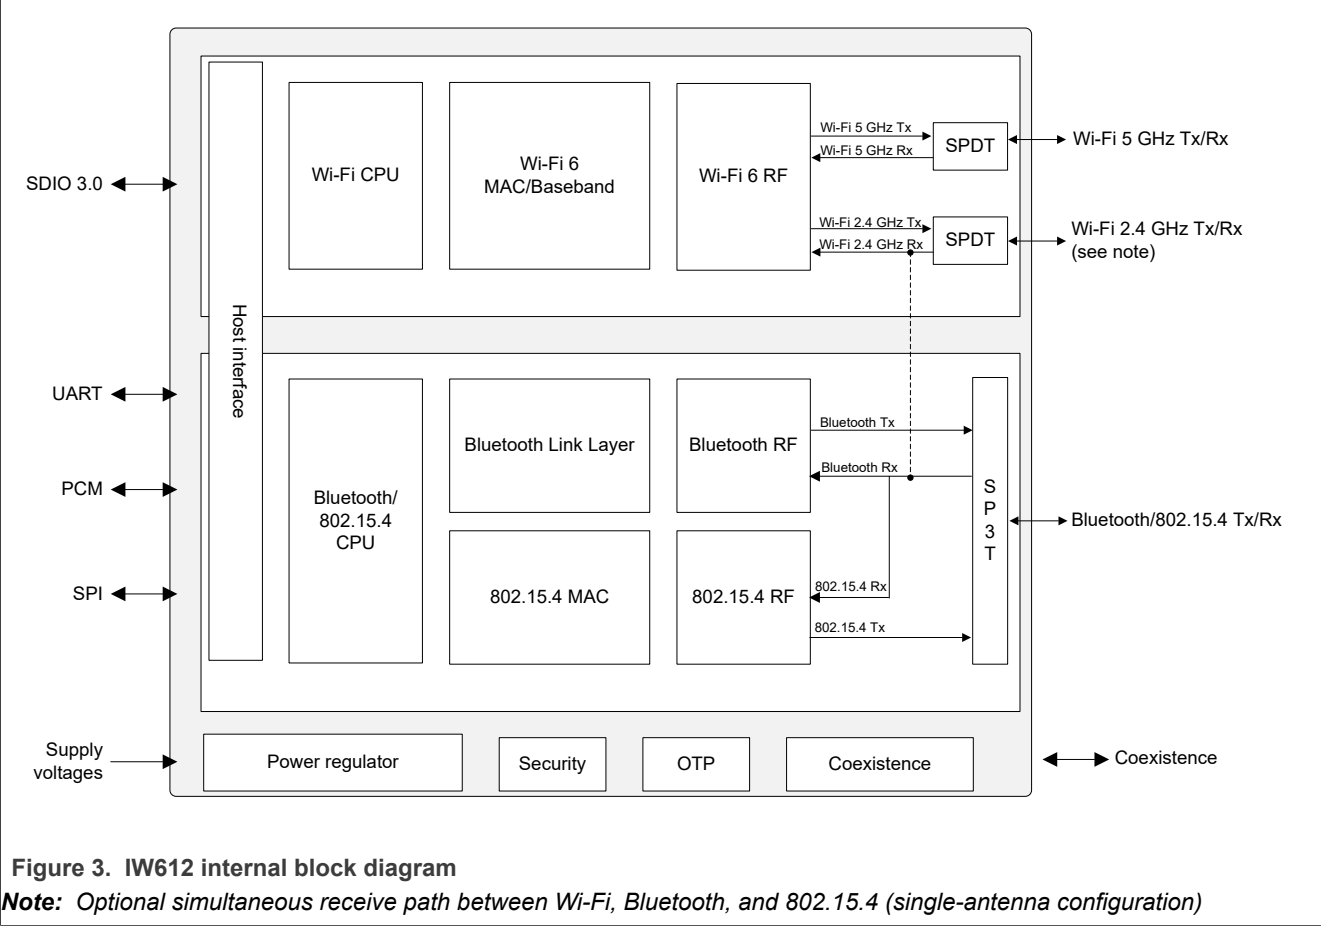

1.7 General features

- Package options
 - HVQFN116 (dual-row) 9 mm x 9 mm x 0.85 mm with 0.5 mm pitch
 - WLCSP140 4.385 mm x 4.96 mm x 0.455 mm with 0.3 mm pitch
- Simultaneous Wi-Fi, Bluetooth and 802.15.4 receive
 - Single and dual antenna configurations supported
- Simultaneous Wi-Fi, Bluetooth/802.15.4 transmit
 - Dual antenna configuration supported
- Simultaneous Wi-Fi and Bluetooth receive
 - Single and dual antenna configurations supported
- Simultaneous Wi-Fi and Bluetooth transmit
 - Dual antenna configuration supported
- Coexistence
 - Internal coexistence between Wi-Fi, Bluetooth and 802.15.4
 - External coexistence interface for connection to external radios such as LTE
- Power management
 - Efficient power management system
 - Deep-sleep low-power mode
 - Integrated high-efficiency buck DC-DC converter
 - Wake-up through GPIO, host interface, and RTC
- One Time Programmable (OTP) memory to store the MAC address and calibration data
- Security
 - Hardware root of trust
 - Authenticated and secured boot
 - OTP-based life-cycle state support

1.8 Product family devices

- AW611: Automotive AECQ-100 grade 3, Wi-Fi 6 and Bluetooth/Bluetooth Low Energy (LE)
- IW611: Wi-Fi 6 and Bluetooth/Bluetooth Low Energy (LE)
- IW612: Wi-Fi 6, Bluetooth/Bluetooth Low Energy (LE), and 802.15.4 Tri-radio

3 Wi-Fi subsystem

3.1 IEEE 802.11 standards

- 802.11ax 1x1 SU and MU-MIMO/OFDMA
- 802.11ac Wave 1/2 backward compatible
- 802.11n/a/g/b backward compatible
- 802.11d operation in additional regulatory domains
- 802.11az accurate ranging
- 802.11e quality of service
- 802.11h transmit power control
- 802.11h DFS radar pulse detection
- 802.11k radio resource measurement
- 802.11mc precise indoor location positioning
- 802.11r fast hand-off for AP roaming
- 802.11v BTM frame transmission/reception
- 802.11w protected management frames
- 802.11y ECSA
- 802.11z tunneled direct link setup
- Fully supports clients (stations) implementing IEEE Power Save mode

3.2 Wi-Fi MAC

- 802.11ax 1x1 MU-MIMO MAC
- Trigger Frame Formats
 - Basic trigger frame
 - MU-BAR, MU-RTS, Beamforming Report Poll (BFRP), BSR Poll (BSRP) trigger variant
 - Trigger frame MAC padding
- HE Variants of HT Control
 - Basic format
 - UL Power Headroom
 - Receive Operation Mode control subfield
- HE MU Frame Exchange Sequences
- M-BA and C-BA Variants in BA Frames
- MU-RTS/CTS Procedures
- Target Wait Time Scheduling
- HE Dual-NAV
- UL Carrier Sensing
- Buffer Status Reports in response to BSRP trigger frames
- Operating Mode Indication (OMI)
- A-MPDU Rx (de-aggregation) and Tx (aggregation) (supports single-MPDU A-MPDU)
- Reduced Inter-Frame Spacing (RIFS) receive
- Management information base counters
- Radio resource measurement counters
- Quality of service queues
- Block acknowledgment extension
- Dynamic frequency selection
- Multiple-BSS/Station
- Long and short preamble generation on a frame-by-frame basis for 802.11b frames
- Transmit rate adaptation
- Transmit power control
- Mobile hotspot

3.3 Wi-Fi baseband

- 802.11ax 1x1 MU-MIMO baseband, backward compatible with 802.11ac/n/a/g/b technology
- Bandwidth support
 - 20 MHz
 - 40 MHz
 - 80 MHz
- Modulation and Coding Schemes (MCS)
 - 802.11ax—MCS0~11
 - 802.11ac—MCS0~9
 - 802.11n—MCS0~7
 - Dual Sub-Carrier Modulation (DCM)
 - MCS0
 - BCC and LDPC coding
- Frame Formats
 - 802.11ax HE_SU (Tx/Rx)
 - 802.11ax HE_MU (Rx)
 - 802.11ax HE_ER_SU (Tx/Rx)
 - 802.11ax HE_TB (Tx)
 - 802.11ac VHT
 - 802.11n HT
 - 802.11a (including dup/quad modes)
 - 802.11g (including dup mode)
 - 802.11b
- Uplink MU-MIMO Tx as STA
- Downlink MU-MIMO Rx as STA
- Aggressive Packet Extension
- Range Extension
- Receiver Beam Change
- Guard Interval Modes
 - 1x HE-LTF with 0.8 us GI
 - 1x HE-LTF with 1.6 us GI (for UL TB PPDU)
 - 2x HE-LTF with 0.8 us GI
 - 2x HE-LTF with 1.6 us GI
 - 4x HE-LTF with 3.2 us GI
 - 4x HE-LTF with 0.8 us GI
- Dynamic Frequency Selection (DFS) (radar detection)
- Optional 802.11ac and 802.11n MIMO features:
 - 20/40/80 MHz coexistence with middle-packet detection (GI detection) for enhanced CCA
 - LDPC transmission and reception for both 802.11ac and 802.11n
 - Short guard interval (0.4 us)
 - RIFS on receive path for 802.11n packets
 - VHT MU-PPDU (receive)
- Power save features

3.4 Wi-Fi radio

- 5 GHz and 2.4 GHz Wi-Fi band operation
- 802.11ax 1x1 MU-MIMO on-chip RF radio
- Integrated PA, LNA

3.5 RF channels

Table 3 shows the list of supported channels for 2.4 GHz and 5 GHz.

177	5885 MHz	—	—	—	—

3.6 Wi-Fi encryption

- Supports WPA2 and WPA3 personal and enterprise
- Data Frame Encryption/Decryption
 - Advanced Encryption Standard (AES) / Counter-Mode/CBC-MAC Protocol (CCMP)
 - Advanced Encryption Standard (AES) / Galois/Counter Mode Protocol (GCMP)
 - WLAN Authentication and Privacy Infrastructure (WAPI)
- Management Frame Encryption/Decryption for broadcast/multicast packets
 - Advanced Encryption Standard (AES) / Cipher-based Message Authentication Code (CMAC)
 - BIP-GMAC
- Management Frame Encryption/Decryption for unicast packets
 - AES/CCMP
 - AES/GCMP

3.7 Beamforming

- 802.11ax/ac/n Explicit Beamformee
 - Supports sounding feedback for up to 4x4 Beamformer

3.8 Wi-Fi host interface

- SDIO 3.0 (4-bit SDIO and 1-bit SDIO) with transfer rates up to SDR104 (208 MHz)

4 Bluetooth subsystem

4.1 Bluetooth features

- Bluetooth 5.4 certified
- Bluetooth 5.2 features supported
- Bluetooth Class 2
- Bluetooth Class 1
- Single-ended, shared TX/RX path for Bluetooth
- Wi-Fi/Bluetooth coexistence protocol support
- I2S/PCM interface for voice applications
- Baseband/radio BDR/EDR packet types—1 Mbps (GFSK), 2 Mbps ($\pi/4$ -DQPSK), 3 Mbps (8DPSK)
- Fully functional Bluetooth baseband—AFH, forward error correction, header error control, access code correlation, CRC, encryption bit stream generation, and whitening
- Interlaced scan for faster connection setup
- Simultaneous active ACL connection support
- Automatic ACL packet type selection
- Full central and peripheral piconet support⁴
- Scatternet support
- Standard UART HCI transport layer
- HCI layer to integrate with profile stack
- SCO/eSCO links with hardware accelerated audio signal processing and hardware supported PPEC algorithm for speech quality improvement
- All standard SCO/eSCO voice coding
- A2DP support
- All standard pairing, authentication, link key, and encryption operations
- Standard Bluetooth power-saving mechanisms (hold, sniff modes, and sniff subrating)
- Enhanced Power Control (EPC)
- Channel Quality Driven Data Rate (CQDDR)
- Wideband Speech (WBS) support (2 WBS links)
- Encryption (AES) support

⁴ The master/slave replacement in this document follows the recommendation of Bluetooth SIG.

4.2 Bluetooth Low Energy (LE) features

- Bluetooth LE 5.4 certified
- Bluetooth LE 5.2 features supported
- Supports up to 16 simultaneous central/peripheral connections⁵
- Wi-Fi/Bluetooth coexistence protocol support
- Shared RF with BDR/EDR
- Encryption (AES) support
- Intelligent Adaptive Frequency Hopping (AFH)
- Bluetooth LE Privacy 1.3
- Bluetooth LE Secure Connection
- Bluetooth LE Data Length Extension
- Bluetooth LE Advertising Extension
- Bluetooth LE Long Range
- Bluetooth LE 2 Mbps
- Bluetooth LE power control
- Bluetooth LE isochronous channels⁶

4.3 Bluetooth host interface

- High-Speed UART with support up to 3 Mbps baud rate

⁵ The master/slave replacement in this document follows the recommendation of Bluetooth SIG.

⁶ Bluetooth LE audio supported with external host running Low Complexity Communication codec (LC3) through HCI interface

4.4 Digital audio interfaces

4.4.1 I2S interface

- Central or peripheral mode⁷
- I2S (Inter-IC Sound) interface for audio data connection to Analog-to-Digital Converters (ADC) and Digital-to-Analog Converters (DAC)
- 3-state I2S interface capability
- I2S pins shared with PCM pins
- Supports clock speeds of 4.096 MHz, 2.048 MHz, and 2 MHz

4.4.1.1 I2S interface signals

Refer to [Section 7.7.8 "Digital audio interface"](#).

4.4.1.2 I2S interface protocol

[Figure 5](#) shows I2S interface protocol.

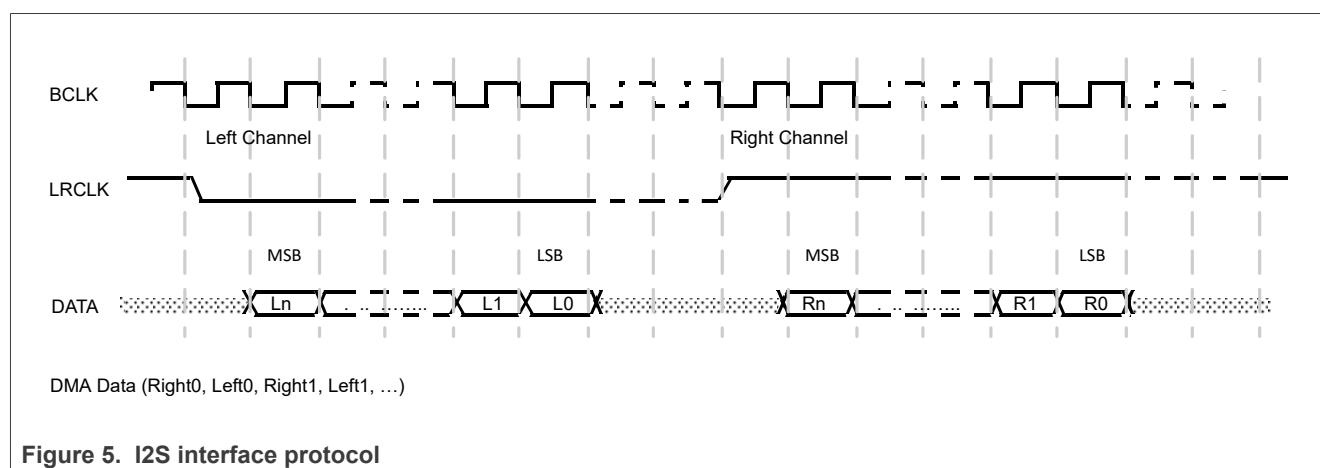

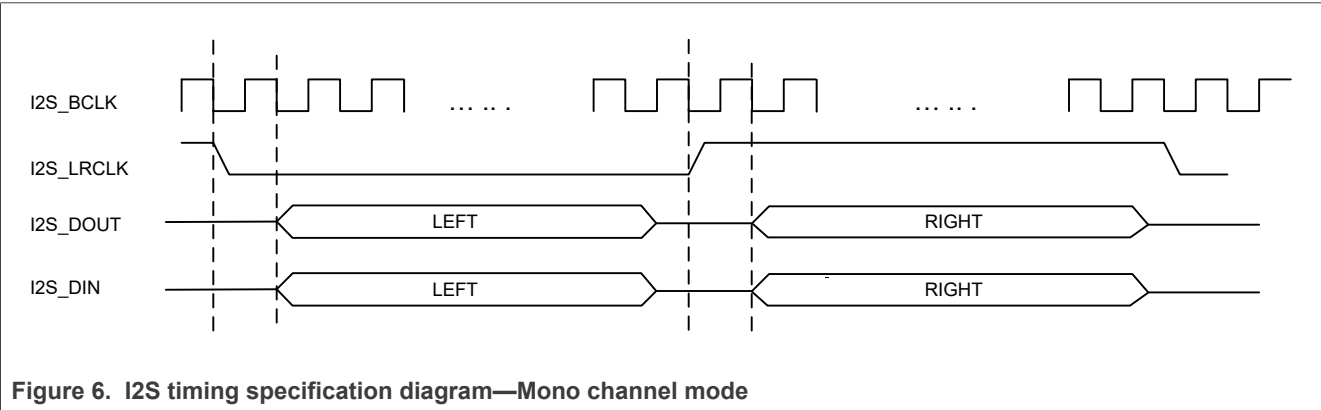

Figure 5. I2S interface protocol

⁷ The master/slave replacement in this document follows the recommendation of Bluetooth SIG.

IW612 supports mono and dual channel modes.
In mono-channel mode, by default the left channel is used for data.

In dual-channel mode, the two channels are supported on two time slots.

4.4.1.3 Clock frequency and audio data resolutions

Audio data may arrive with different input data formats with different sampling rates.

In central mode, the I2S interface uses an audio input clock of 4.096 MHz or 2.048 MHz to provide the appropriate M clock (MCLK) and bit clock (I2S_BCLK) frequency to match the sampling rates of each audio data format. The sampling rates can be 8 kHz to 16 kHz.⁸

In peripheral mode, the I2S interface does not provide the bit clock (I2S_BCLK) but it can provide the M clock (MCLK)⁸.

⁸ The master/slave replacement in this document follows the recommendation of Bluetooth SIG.

4.4.2 PCM interface

- Central or peripheral mode⁹
- PCM bit width size of 16 bits
- Up to four slots with configurable bit width and start positions
- 3-state PCM interface capability
- PCM short frame synchronization
- PCM pins shared with I2S pins
- Supports clock speeds of 4.096 MHz, 2.048 MHz, and 2 MHz

4.4.2.1 PCM interface signal description

Refer to [Section 7.7.8 "Digital audio interface"](#).

4.4.2.2 PCM protocol

The PCM interface supports short frame sync. [Figure 8](#) shows an example of a PCM interface with four signals.

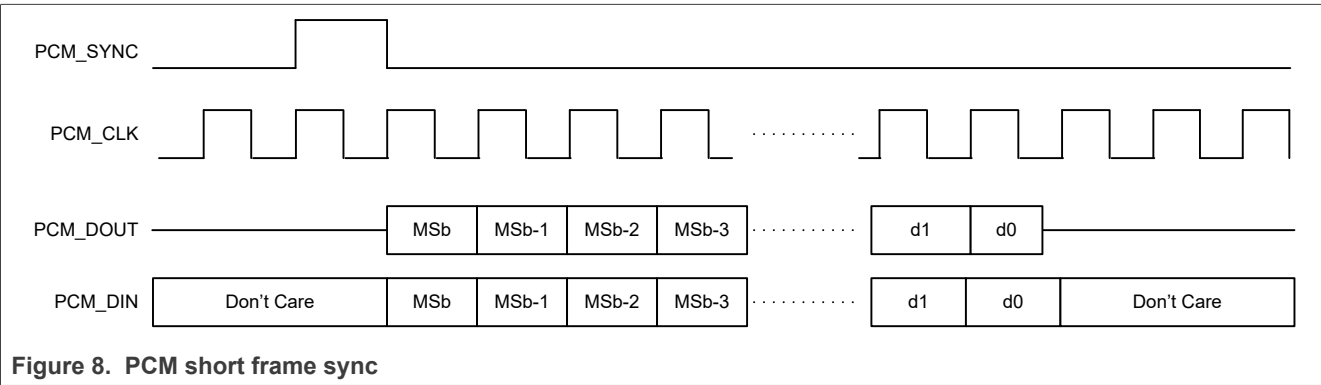

Figure 8. PCM short frame sync

⁹ The master/slave replacement in this document follows the recommendation of Bluetooth SIG.

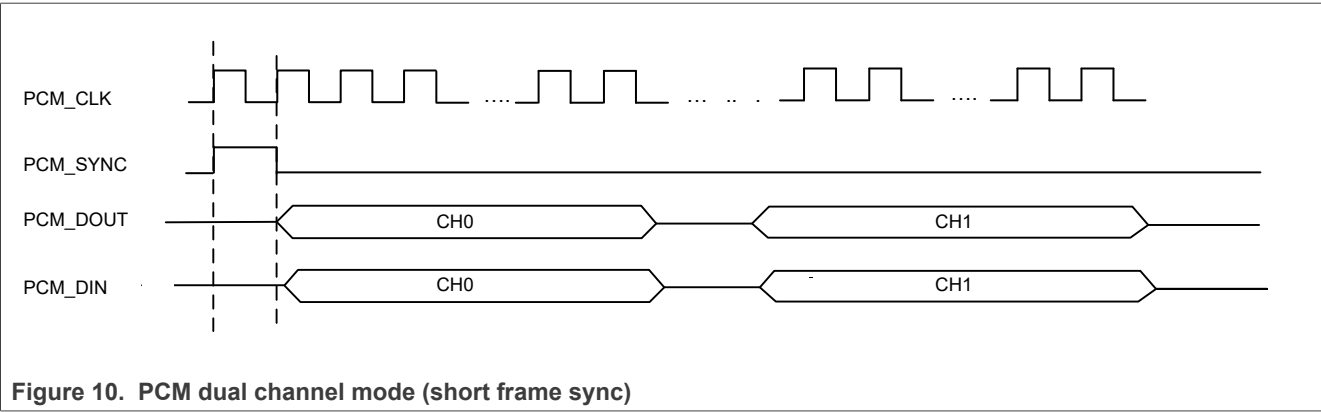

IW612 supports mono and dual channel modes.

Note: [Figure 9](#) and [Figure 10](#) illustrate PCM mono and dual channel modes in short frame sync.

In mono-channel mode, by default the left channel is used for data.

In dual-channel mode, the two channels are supported on two time slots.

4.4.2.3 PCM modes of operation

The PCM interface supports two modes of operation:

- PCM central¹⁰
- PCM peripheral¹⁰

When in PCM central¹⁰ mode, the interface generates a 2 MHz or a 2.048 MHz PCM_CLK and 8 kHz PCM_SYNC signal. An alternative PCM central¹⁰ mode is available that uses an externally generated PCM_CLK, but still generates the 8 kHz PCM_SYNC. The external PCM_CLK must have a frequency that is an integer multiple of 8 kHz. Supported frequencies are in the 512 kHz to 4 MHz range.

When in PCM peripheral¹⁰ mode, the interface has both PCM_CLK and PCM_SYNC as inputs, thereby letting another unit on the PCM bus generate the signals.

The PCM interface consists of up to four PCM slots (time divided) preceded by a PCM sync signal. Each PCM slot is 16 bits wide. The slots can be separated in time, but are not required to follow immediately after one other. The timing is relative to PCM_CLK. [Figure 11](#) shows an example of a PCM burst with two slots.

The burst starts with a PCM_SYNC and then follows the PCM burst. In this example, the PCM burst consists of two PCM slots separated with two PCM_CLK clock cycles. The PCM slots can be configured to start at an arbitrary point in time, and the start value is given relative to the start of the PCM_SYNC. The timing of the four PCM slots must be such that slot 0 is always located before slot 1, slot 1 before slot 2, etc. It is possible to only use for example slot 1 and not slot 0.

Figure 11. PCM burst with two PCM slots - PCM short frame sync

¹⁰ The master/slave replacement in this document follows the recommendation of Bluetooth SIG.

5 802.15.4 radio subsystem

5.1 802.15.4 radio features

- IEEE 802.15.4-2020 compliant supporting Thread and Zigbee in 2.4 GHz band
- Support for Matter over Thread
- MAC accelerator with packet formatting, CRCs, address check, auto-acknowledgements and timers
- Programmable packet filtering for lower power consumption
- Timestamp for transmit and receive packets
- Received Signal Strength Indication (RSSI) of received packets
- Integrated high power PA up to +21 dBm transmit power
- 128-bit AES security

5.2 802.15.4 host interface

- SPI with maximum clock speed of 10 MHz

6 Coexistence

6.1 Antenna configuration

The IW612 supports two antenna configurations: single-antenna and dual-antenna configurations.

6.1.1 Dual-antenna configuration

[Table 4](#) shows the supported TX and RX operations with the IW612 dual-antenna configuration.

Table 4. Wi-Fi, Bluetooth/Bluetooth LE, and 802.15.4 supported TX and/or RX operations - Dual-antenna configuration

Row #	Bluetooth/ Bluetooth LE	802.15.4	Wi-Fi 2.4 GHz	Wi-Fi 5 GHz
1	TX	—	—	TX/RX
2	—	TX	—	TX/RX
3	TX	—	TX/RX	—
4	—	TX	TX/RX	—
5	RX	RX	TX/RX	—
6	RX	RX	—	TX/RX

In dual-antenna configuration:

- Wi-Fi 5 GHz TX/RX and Bluetooth TX or 802.15.4 TX operations are simultaneous (rows 1 and 2)
- Wi-Fi 2.4 GHz TX/RX and Bluetooth TX or 802.15.4 TX operations are simultaneous (rows 3 and 4)
- Wi-Fi 2.4 GHz or Wi-Fi 5 GHz TX/RX, Bluetooth and 802.15.4 RX operations are simultaneous (rows 5 and 6)

6.1.2 Single-antenna configuration

In single-antenna configuration, there is arbitration for the transmit operation of the Wi-Fi 2.4 GHz, Bluetooth, and 802.15.4 radios.

[Table 5](#) shows the supported TX and/or RX operations with the IW612 single-antenna configuration.

Table 5. Wi-Fi, Bluetooth/Bluetooth LE, and 802.15.4 supported TX and/or RX operations - Single-antenna configuration

Row #	Bluetooth/ Bluetooth LE	802.15.4	Wi-Fi 2.4 GHz	Wi-Fi 5 GHz
1	TX	—	—	TX/RX
2	—	TX	—	TX/RX
3	—	—	TX	—
4	RX	RX	RX	—
5	RX	RX	—	TX/RX

In single-antenna configuration:

- Wi-Fi 2.4 GHz, Bluetooth, and 802.15.4 radio TX operation is arbitrated (rows 1, 2, and 3)
- Wi-Fi 2.4 GHz, Bluetooth, and 802.15.4 radio RX operation is simultaneous, using the optional path for simultaneous receive ([Section 1.9](#)) (row 4)
- Wi-Fi 5 GHz TX/RX and Bluetooth TX or 802.15.4 TX operations are simultaneous (rows 1, 2)

6.2 Central hardware packet arbiter

The central hardware packet traffic arbiter arbitrates the transmit and/or receive operations between the on-chip Wi-Fi, Bluetooth, and 802.15.4 radios as per the supported hardware configuration. See [Section 6.1](#).

The central hardware packet traffic arbiter (PTA) has the following features:

- Supports simultaneous Wi-Fi and Bluetooth, or Wi-Fi and 802.15.4 transmissions to optimize output transmit power levels and performance
- Supports simultaneous receive for all on-chip radios

In addition to the on-chip radios, the central hardware packet traffic arbiter arbitrates one external radio. Refer to [Section 6.3](#).

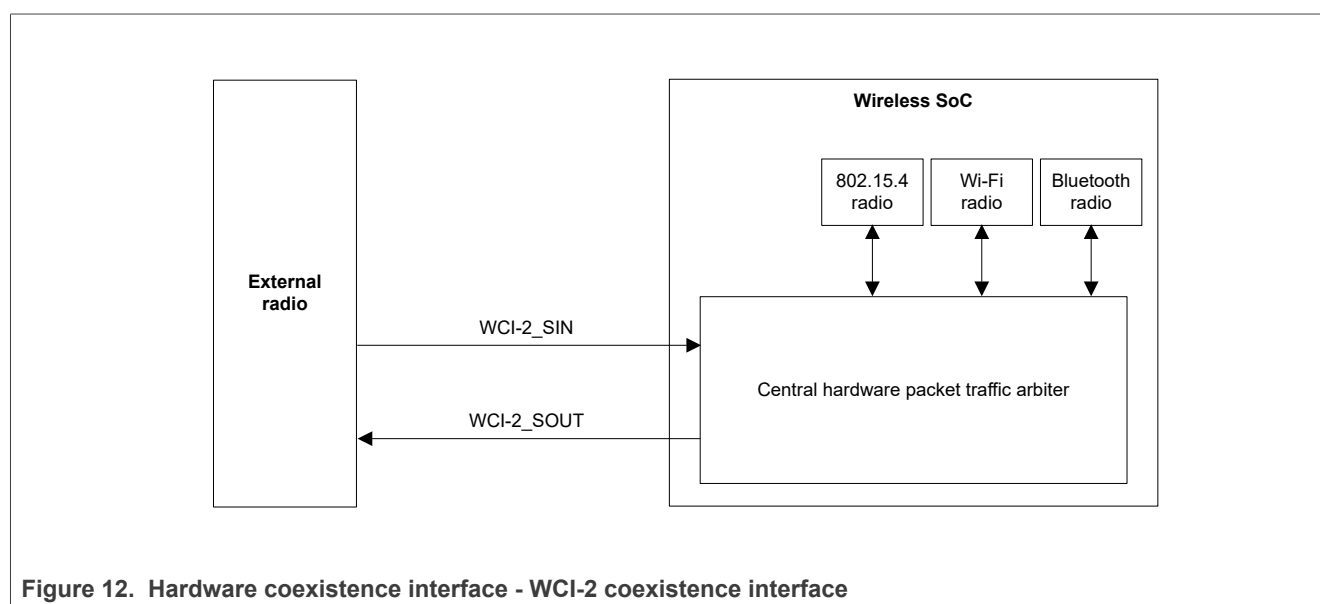

6.3 Coexistence with an external radio

WCI-2 and PTA external coexistence interfaces are used for the coexistence with an external radio.

WCI-2 external coexistence interface

WCI-2 is the two-wire wireless coexistence interface 2 protocol defined in the Bluetooth Core Specification (Vol 7 Part C).

[Figure 12](#) illustrates the hardware coexistence interface between the central hardware packet arbiter and the external radio. In the figure, Wireless SoC is IW612.

Note: Refer to [Section 7.7.11](#) for the description of WCI-2 coexistence interface signals.

PTA external coexistence interface

Note: The 802.15.4 host interface and the PTA external coexistence interface share the same multi-function pins (MFP). Refer to [Section 7.7.2 "General purpose I/O \(GPIO\) \(MFP\)"](#) for more details. As such, when 802.15.4 is used, WCI-2 is the only interface available for coexistence with an external radio.

Refer to the application note *Coexistence Overview for IW612 (AN13382)* for more information on IW612 coexistence feature.

7.7 Pin description

7.7.1 Pin states

The pin states information provided in the tables includes:

- **No Pad Power State** indicates the state when there is no power
- **PwrDwn State** denotes the power-down state in default configuration. Many pads have programmable power-down values, which can be set by firmware.
- **Reset State** is the state after the power-on-reset state and before the hardware state (HW State)
- **HW State** (hardware state) is the state after boot code finishes and before firmware download begins (firmware may change the pin state). HW State may differ based on the pin muxing/strap setting. For example, for UART_RTSn and UART_SOUT, the boot code will enable the UART interface when the device is in SDIO-UARTmode, making the HW states output high and output low, respectively.
- **PwrDwn Prog** indicates if the power-down state can be programmed
- **Internal PU/PD** columns indicates the following:
 - Type of PU/PD (weak vs nominal)
 - The polarity (PU vs. PD)

The internal pull-up or pull-down applies when the pin is in input mode

- **PU** denotes whether the pull-up can be programmed or not
- **PD** denotes whether the pull-down can be programmed or not
- Pull-up and pull-down are only effective when the pad is in input mode
- After firmware is downloaded, the pads (GPIO, RF control, and so on) are programmed in functional mode per the functionality of the pins

7.8 Configuration pins

The following table shows the pins used as configuration inputs to set parameters following a reset. The definition of these pins changes immediately after reset to their usual function.

To set a configuration bit to 0, attach a 51 kΩ resistor from the pin to ground. No external circuitry is required to set a configuration bit to 1.

Table 26. Configuration pins

Configuration bits	Pin name	Configuration function
CON[7]	RF_CNTL4	Reserved. Set to 1.
CON[5]	RF_CNTL3/CONFIG_XOSC_SEL	Reference clock frequency select 1 = 40 MHz
CON[1:0]	CONFIG_HOST_BOOT[1:0]	Host configuration options. Selects the host interface used for Wi-Fi, Bluetooth and 802.15.4 radio. 11 = (default). See the table below.

8 Power information

8.1 Power-up sequence

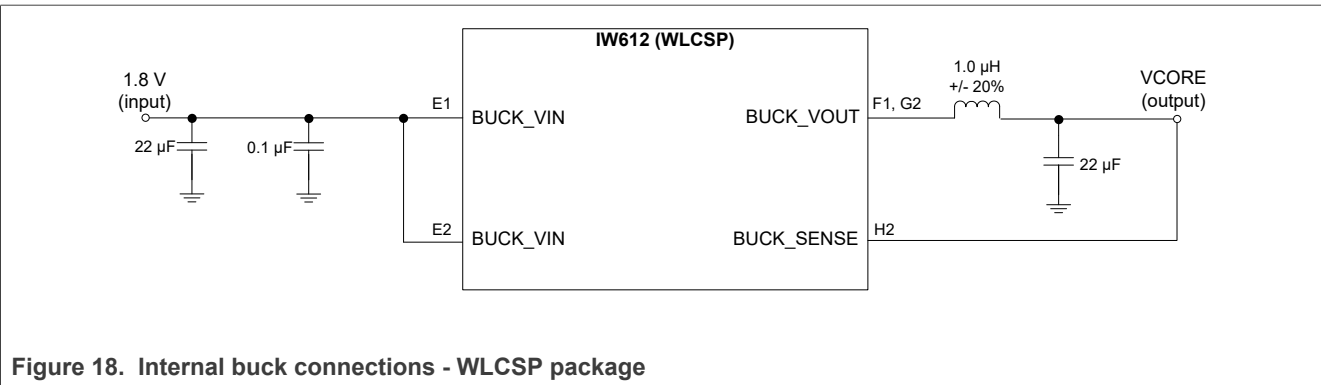

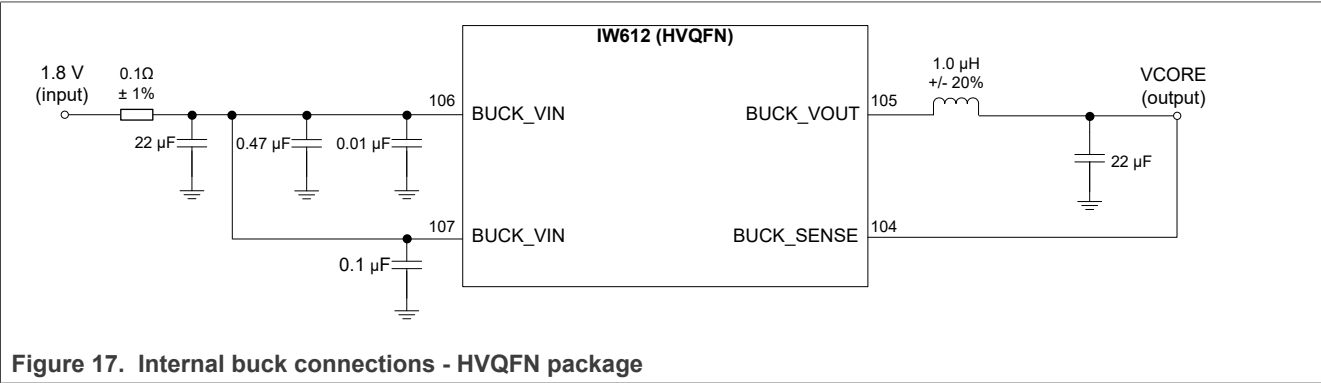

The IW612 does not have power-up sequence requirements. The power-down pin (PDn) must be held low (asserted) until all external clock and power supply rails are stable. See [Figure 16](#).

[1] T_{PU_RESET} is defined in [Section 12.10.1](#).

8.2 Internal buck regulator

VCORE pins must be supplied by the internal Buck regulator. The following figure shows the application circuit for VCORE supply using the internal Buck regulator. The power inductor in the application is chosen to maximize the internal Buck efficiency.

Deep-sleep mode

When the internal Buck is used to supply VCORE, the VCORE level can be reduced to approximately 0.8 V to reduce power consumption in deep sleep mode.

9 Absolute maximum ratings

CAUTION: The absolute maximum ratings table defines the limitations for electrical and thermal stresses. These limits prevent permanent damage to the device. Exposure to conditions at or beyond these ratings is not guaranteed and can damage the device.

12.7 External radio coexistence interface specifications

12.7.1 WCI-2 coexistence interface specifications

12.7.1.1 WCI-2 interface

WCI-2 is a simplified 2-wire UART interface defined in Bluetooth Core Spec Vol 7 Part C.

[Figure 36](#) shows UART waveform.

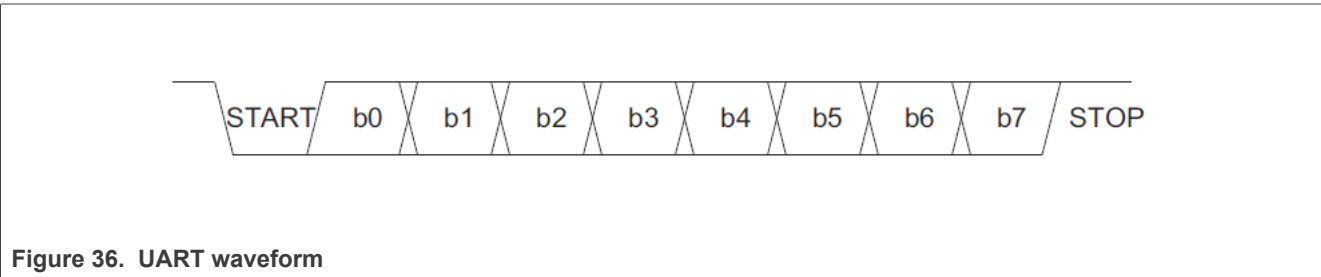

Figure 36. UART waveform

[Figure 37](#) illustrates WCI-2 hardware coexistence interface between IW612 (Wireless SoC) and the external radio.

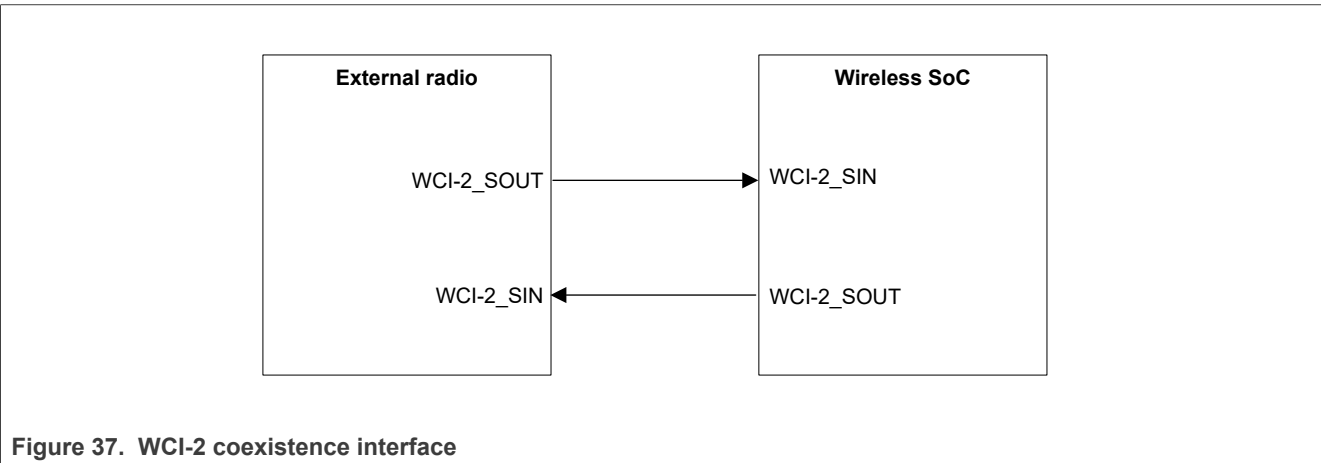

Figure 37. WCI-2 coexistence interface

12.7.1.2 WCI-2 messages

WCI-2 coexistence interface supports the messages defined in Bluetooth Core Specification Vol 7 Part C for request and grant, where:

- The real time message from the external radio to IW612 indicates the request to operate ([Figure 38](#))
 - MWS_Rx=1 indicates an external radio request to Rx
 - MWS_Tx=1 indicates an external radio request to Tx

Type(0)	Type(1)	Type(2)	MSG(0)	MSG(1)	MSG(2)	MSG(3)	MSG(4)
0	0	0	FRAME_SYNC	MWS_RX	MWS_TX	MWS_PATTERN[0]	MWS_PATTERN[1]

Figure 38. Type 0: Real time signaling message - external radio to IW612

- The external radio can send an optional second message following the real time message to indicate the traffic priority using the vendor specific message ([Figure 39](#)). Otherwise, the priority is set via a BCA register.

Figure 39. Type 7: Vendor specific message - external radio to IW612

- The real time message from IW612 to the external radio indicates the arbitration results ([Figure 40](#)):
 - BT_Rx_Pri = 1: the Bluetooth radio Rx wins the arbitration and is in operation
 - BT_Tx_On = 1: the Bluetooth radio Tx wins the arbitration and is in operation
 - 802_Rx_Pri = 1: Wi-Fi Rx wins the arbitration and is in operation
 - 802_Tx_On = 1: Wi-Fi Tx wins the arbitration and is in operation
 - Otherwise, the external radio is granted

12.10 Power-down specifications

12.10.1 PDn asserted low—Power supplies remain high

The following table and figure show the specifications for the PDn signal when it is asserted (low) while all power supplies to the device are high. After PDn is deasserted (high), the device takes 20 ms to get ready for SDIO enumeration.

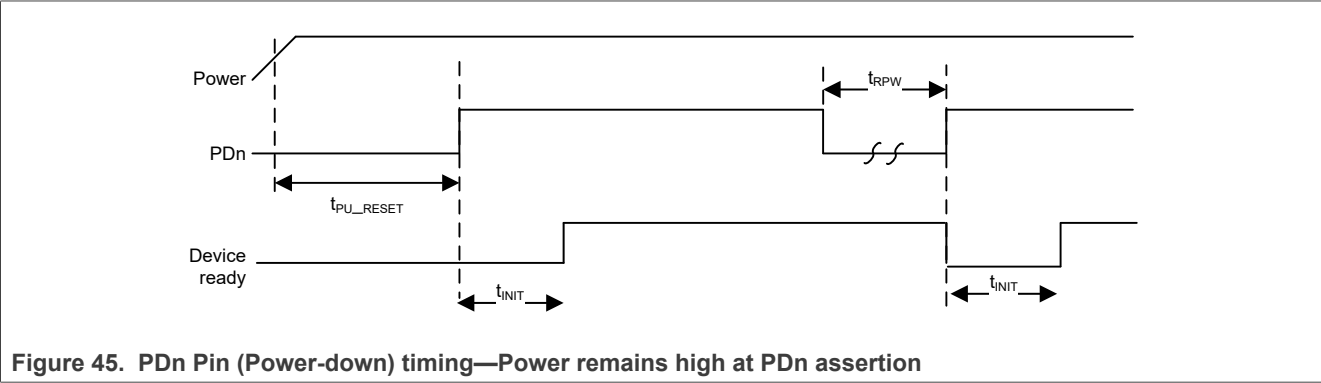

Table 63. PDn pin (Power-down) specifications—Power remains high at PDn assertion

13.2 WLCSP underfill

To meet NXP board level reliability (BLR) requirements of 500 temperature cycles between -40°C to +125°C (Ta), and prevent WLCSP reliability issues, it is mandatory to select a molded underfill (for molded module application) or capillary underfill material (for unmolded module applications). The molded underfill or capillary underfill material must have less than 20 ppm halide like chloride as per the material supplier specifications.

Data sheet status

Document status ^{[1][2]}	Product status ^[3]	Definition
Objective [short] data sheet	Development	This document contains data from the objective specification for product development.
Preliminary [short] data sheet	Qualification	This document contains data from the preliminary specification.
Product [short] data sheet	Production	This document contains the product specification.

- [1] Please consult the most recently issued document before initiating or completing a design.
[2] The term 'short data sheet' is explained in section "Definitions".
[3] The product status of device(s) described in this document may have changed since this document was published and may differ in case of multiple devices. The latest product status information is available on the Internet at URL <https://www.nxp.com>.

Definitions

Draft — A draft status on a document indicates that the content is still under internal review and subject to formal approval, which may result in modifications or additions. NXP Semiconductors does not give any representations or warranties as to the accuracy or completeness of information included in a draft version of a document and shall have no liability for the consequences of use of such information.

Short data sheet — A short data sheet is an extract from a full data sheet with the same product type number(s) and title. A short data sheet is intended for quick reference only and should not be relied upon to contain detailed and full information. For detailed and full information see the relevant full data sheet, which is available on request via the local NXP Semiconductors sales office. In case of any inconsistency or conflict with the short data sheet, the full data sheet shall prevail.

Product specification — The information and data provided in a Product data sheet shall define the specification of the product as agreed between NXP Semiconductors and its customer, unless NXP Semiconductors and customer have explicitly agreed otherwise in writing. In no event however, shall an agreement be valid in which the NXP Semiconductors product is deemed to offer functions and qualities beyond those described in the Product data sheet.

Disclaimers

Limited warranty and liability — Information in this document is believed to be accurate and reliable. However, NXP Semiconductors does not give any representations or warranties, expressed or implied, as to the accuracy or completeness of such information and shall have no liability for the consequences of use of such information. NXP Semiconductors takes no responsibility for the content in this document if provided by an information source outside of NXP Semiconductors.

In no event shall NXP Semiconductors be liable for any indirect, incidental, punitive, special or consequential damages (including - without limitation - lost profits, lost savings, business interruption, costs related to the removal or replacement of any products or rework charges) whether or not such damages are based on tort (including negligence), warranty, breach of contract or any other legal theory.

Notwithstanding any damages that customer might incur for any reason whatsoever, NXP Semiconductors' aggregate and cumulative liability towards customer for the products described herein shall be limited in accordance with the Terms and conditions of commercial sale of NXP Semiconductors.

Right to make changes — NXP Semiconductors reserves the right to make changes to information published in this document, including without limitation specifications and product descriptions, at any time and without notice. This document supersedes and replaces all information supplied prior to the publication hereof.

Suitability for use — NXP Semiconductors products are not designed, authorized or warranted to be suitable for use in life support, life-critical or safety-critical systems or equipment, nor in applications where failure or malfunction of an NXP Semiconductors product can reasonably be expected to result in personal injury, death or severe property or environmental damage. NXP Semiconductors and its suppliers accept no liability for inclusion and/or use of NXP Semiconductors products in such equipment or applications and therefore such inclusion and/or use is at the customer's own risk.

Applications — Applications that are described herein for any of these products are for illustrative purposes only. NXP Semiconductors makes no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

Customers are responsible for the design and operation of their applications and products using NXP Semiconductors products, and NXP Semiconductors accepts no liability for any assistance with applications or customer product design. It is customer's sole responsibility to determine whether the NXP Semiconductors product is suitable and fit for the customer's applications and products planned, as well as for the planned application and use of customer's third party customer(s). Customers should provide appropriate design and operating safeguards to minimize the risks associated with their applications and products.

NXP Semiconductors does not accept any liability related to any default, damage, costs or problem which is based on any weakness or default in the customer's applications or products, or the application or use by customer's third party customer(s). Customer is responsible for doing all necessary testing for the customer's applications and products using NXP Semiconductors products in order to avoid a default of the applications and the products or of the application or use by customer's third party customer(s). NXP does not accept any liability in this respect.

Limiting values — Stress above one or more limiting values (as defined in the Absolute Maximum Ratings System of IEC 60134) will cause permanent damage to the device. Limiting values are stress ratings only and (proper) operation of the device at these or any other conditions above those given in the Recommended operating conditions section (if present) or the Characteristics sections of this document is not warranted. Constant or repeated exposure to limiting values will permanently and irreversibly affect the quality and reliability of the device.

Terms and conditions of commercial sale — NXP Semiconductors products are sold subject to the general terms and conditions of commercial sale, as published at <https://www.nxp.com/profile/terms>, unless otherwise agreed in a valid written individual agreement. In case an individual agreement is concluded only the terms and conditions of the respective agreement shall apply. NXP Semiconductors hereby expressly objects to applying the customer's general terms and conditions with regard to the purchase of NXP Semiconductors products by customer.

No offer to sell or license — Nothing in this document may be interpreted or construed as an offer to sell products that is open for acceptance or the grant, conveyance or implication of any license under any copyrights, patents or other industrial or intellectual property rights.

1x1 Dual-band Wi-Fi 6, Bluetooth 5.4 and 802.15.4 Tri-radio Solution

Quick reference data — The Quick reference data is an extract of the product data given in the Limiting values and Characteristics sections of this document, and as such is not complete, exhaustive or legally binding.

Export control — This document as well as the item(s) described herein may be subject to export control regulations. Export might require a prior authorization from competent authorities.

Suitability for use in non-automotive qualified products — Unless this document expressly states that this specific NXP Semiconductors product is automotive qualified, the product is not suitable for automotive use. It is neither qualified nor tested in accordance with automotive testing or application requirements. NXP Semiconductors accepts no liability for inclusion and/or use of non-automotive qualified products in automotive equipment or applications.

In the event that customer uses the product for design-in and use in automotive applications to automotive specifications and standards, customer (a) shall use the product without NXP Semiconductors' warranty of the product for such automotive applications, use and specifications, and (b) whenever customer uses the product for automotive applications beyond NXP Semiconductors' specifications such use shall be solely at customer's own risk, and (c) customer fully indemnifies NXP Semiconductors for any liability, damages or failed product claims resulting from customer design and use of the product for automotive applications beyond NXP Semiconductors' standard warranty and NXP Semiconductors' product specifications.

HTML publications — An HTML version, if available, of this document is provided as a courtesy. Definitive information is contained in the applicable document in PDF format. If there is a discrepancy between the HTML document and the PDF document, the PDF document has priority.

Translations — A non-English (translated) version of a document, including the legal information in that document, is for reference only. The English version shall prevail in case of any discrepancy between the translated and English versions.

Security — Customer understands that all NXP products may be subject to unidentified vulnerabilities or may support established security standards or specifications with known limitations. Customer is responsible for the design and operation of its applications and products throughout their lifecycles to reduce the effect of these vulnerabilities on customer's applications and products. Customer's responsibility also extends to other open and/or proprietary technologies supported by NXP products for use in customer's applications. NXP accepts no liability for any vulnerability. Customer should regularly check security updates from NXP and follow up appropriately.

Customer shall select products with security features that best meet rules, regulations, and standards of the intended application and make the ultimate design decisions regarding its products and is solely responsible for compliance with all legal, regulatory, and security related requirements concerning its products, regardless of any information or support that may be provided by NXP.

NXP has a Product Security Incident Response Team (PSIRT) (reachable at PSIRT@nxp.com) that manages the investigation, reporting, and solution release to security vulnerabilities of NXP products.

NXP B.V. — NXP B.V. is not an operating company and it does not distribute or sell products.
