More information

SODIMM DDR3L de 204 pines

Módulos para ordenadores portátiles que funcionan a una velocidad de hasta 1600 MT/s y tienen una latencia de CL11. Es bivoltaje y funciona tanto a 1,35 V como a 1,5 V. Es una memoria sin búfer y sin ECC. Cumple con la normativa de la industria para DIMM de contorno pequeño con disposición de 204 pines y es compatible con ordenadores que utilizan memorias DIMM de contorno pequeño DDR3.

Para utilizar la memoria DDR3, su sistema debe tener una ranura SODIMM de 204 pines y un conjunto de chips que admita la memoria DDR3. Un DDR3 SODIMM no encaja en los receptáculos de memoria DDR2 o DDR.

Los SODIMM son más pequeños y delgados que los DIMM normales, y las tarjetas de circuito impreso SODIMM de 204 pines siempre tienen aprox. 2,6 pulgadas de largo y generalmente miden aprox. 1,18 pulgadas (aunque la altura puede variar ligeramente). Cuentan con varios componentes de memoria (generalmente negros) conectados a una tarjeta de circuito impreso (generalmente verde). La cantidad de componentes de memoria en una tarjeta de circuito impreso (PCB) de 204 pines SODIMM puede variar, pero la PCB siempre tendrá 102 pines en la parte frontal y posterior, para un total de 204 pines. Los pines dorados de la parte inferior de la SODIMM proporcionan la conexión entre el módulo de memoria y el receptáculo de memoria.

★★★★★ **5.0** Adding 16GB to T450s easy as pie

Comments about *Crucial 16GB DDR3L-1600 SODIMM*:

Most cost effective ay to max out the memory configuration on a T450s. Buy from the manufacturer costs way too much with the tools available from Crucial to scan the system and make sure what you buy will work this is the way to go. I always buy the minimum memory configuration on the notebooks then run the scanner and buy the upgrade from crucial, always saves money sometime a lot of money.
