DESCRIPTION

TECHNICAL DETAILS

DESCRIPTION

For all those who feared their Game Boy days would be but a memory, worry no more! The Game Boy may be dead, but with this pack you'll have a chance to revive it. We've collected all the right parts so you can assemble the guts of your very own DIY GameGRRRL - a portable Raspberry Pi running MAME and NES emulators.

It's called the PiGRRRL and it's powered by a [Raspberry Pi Model B](#) and a [PiTFT display](#). You'll have to do all the assembly and installation yourself to get gaming, but [our learn guide](#) will help

The PiGRRL has just about everything you need to make this project EXCEPT the case. You will need to 3D print your own case - but check out our [3D printing guide](#) for the pack so you or your friend can 3D print an enclosure. You will also need to solder together the parts so many hand tools and other small parts such as screws or blue tack are required. [Please read through the tutorial so you can see what else is needed to complete this project](#)

Please note this is a medium-difficulty project that uses many Maker skills such as soldering, 3D printing and installing Linux!

TECHNICAL DETAILS

This pack includes:

- 1x Raspberry Pi Model B
- 1x PiTFT - Assembled 320x240 2.8" TFT+Touchscreen for Raspberry Pi
