Compact Headphone Amplifiers

Headphone Amplifier Designed for 0.93V Low Voltage Operation

BU7150NUV

No.15102EET01

●Description

BU7150NUV is Audio Amplifier designed for Single-cell battery operated audio products (VDD = 0.93 ~ 3.5V, at Ta=0~85°C). BU7150NUV can be selected in single-ended mode for stereo headphone and BTL mode for mono speaker operations. For BU7150NUV at VDD = 1.5V, THD+N = 1%, the output power is 14mW at RL = 16Ω in single-ended mode and the output power is 85mW at RL = 8Ω in BTL mode.

●Features

1) Wide battery operation Voltage (0.93V~3.5V, Ta=0~85°C) (1.03V~3.5V, Ta= -40~85°C)
2) BU7150NUV can be selected in single-ended mode for stereo headphone and BTL mode for mono speaker operation
3) Unity-gain stability
4) Click and pop-noise reduction circuit built-in
5) Shutdown mode(Low power mode)
6) High speed turn-on mute mode
7) Thermal shutdown protection circuit
8) Power-on reset circuit not sensed during start-up slew rate of supply voltage
9) Small package (VSON010V3030)

●Applications

Noise-canceling headphone, IC recorder, Mobile phone, PDA, Electronic toys etc..

●Absolute Maximum Ratings (Ta=25℃)

Parameter	Symbol	Ratings	Unit
Supply Voltage	VDD	4.5	V
Input Voltage	VIN	VSS-0.3~VDD+0.3	V
Input Current	IIN	-10~10	mA
Power Dissipation	PD	560 *	mW
Storage Temperature Range	TSTG	-55~+150	°C

*For operating over 25°C, de-rate the value at 5.6mW/°C.
This value is for IC mounted on 74.2 mm x 74.2mm x 1.6mm glass-epoxy PCB of single-layer.

●Operating conditions

Parameter	Symbol	Ratings			Unit
		Min.	Typ.	Max.	
Operation Temperature Range	TOPR	-40	-	85	°C
Supply Voltage (Note 1,2)	VDD	0.93	-	3.5	V

Note 1: If the supply voltage is 0.93V, BU7150NUV does not operate at less than 0°C.
If the supply voltage is more than 1.03V, BU7150NUV operates until -40°C.
(But, it is not the one which guarantees the standard value for electric characteristics.)
Note 2: Ripple in power supply line should not exceed 400mV$_{P-P}$.(VDD=1.5 V, Ta=25°C)

●Electrical characteristics

Ta=25°C, VDD=1.5V, f=1kHz, VSS=GND unless otherwise specified.

Parameter	Symbol	Limits			Unit	Conditions
		Min.	Typ.	Max.		
No Signal Operating Current	IDD	-	1	1.4	mA	No load, No signal
Shutdown Current	ISD	-	3	9	µA	SDB Pin=VSS
Mute Current	IMUTE	-	15	-	µA	MUTEB Pin=VSS, SE
Output Offset Voltage	VOFS	-	5	50	mV	| VOUT1 – VOUT2 |, No signal
Maximum Output Power	PO	70	85	-	mW	RL=8Ω, BTL, THD+N=1%
		-	14	-	mW	RL=16Ω, SE, THD+N=1%
Total Harmonic Distortion +Noise	THD+N	-	0.2	0.5	%	20kHz LPF, RL=8Ω, BTL, PO=25mW
		-	0.1	0.5	%	20kHz LPF, RL=16Ω, SE,PO=5mW
Output Voltage Noise	VNO	-	10	-	μV_{rms}	20kHz LPF + A-weight
Crosstalk	CT	-	85	-	dB	RL=16Ω, SE, 1kHz BPF
Power Supply Rejection Ratio	PSRR	-	62	-	dB	Ripple voltage=200mV_{P-P}, RL=8Ω, BTL, C_{BYPASS}=4.7µF
		-	66	-	dB	Ripple voltage=200mV_{P-P}, RL=16Ω, SE, C_{BYPASS}=4.7µF
Input Logic High Level	VIH	0.7	-	-	V	MUTEB Pin, SDB Pin
Input Logic Low Level	VIL	-	-	0.3	V	MUTEB Pin, SDB Pin

"BTL" is BTL-mode when MODE Pin = VDD, "SE" is single-ended mode when MODE Pin = VSS.
Turn-on time in BTL mode is about 11 times faster than single-ended mode.
Also, BTL mode does not have MUTE mode. When MUTEB Pin = VSS, then it will be shutdown mode.

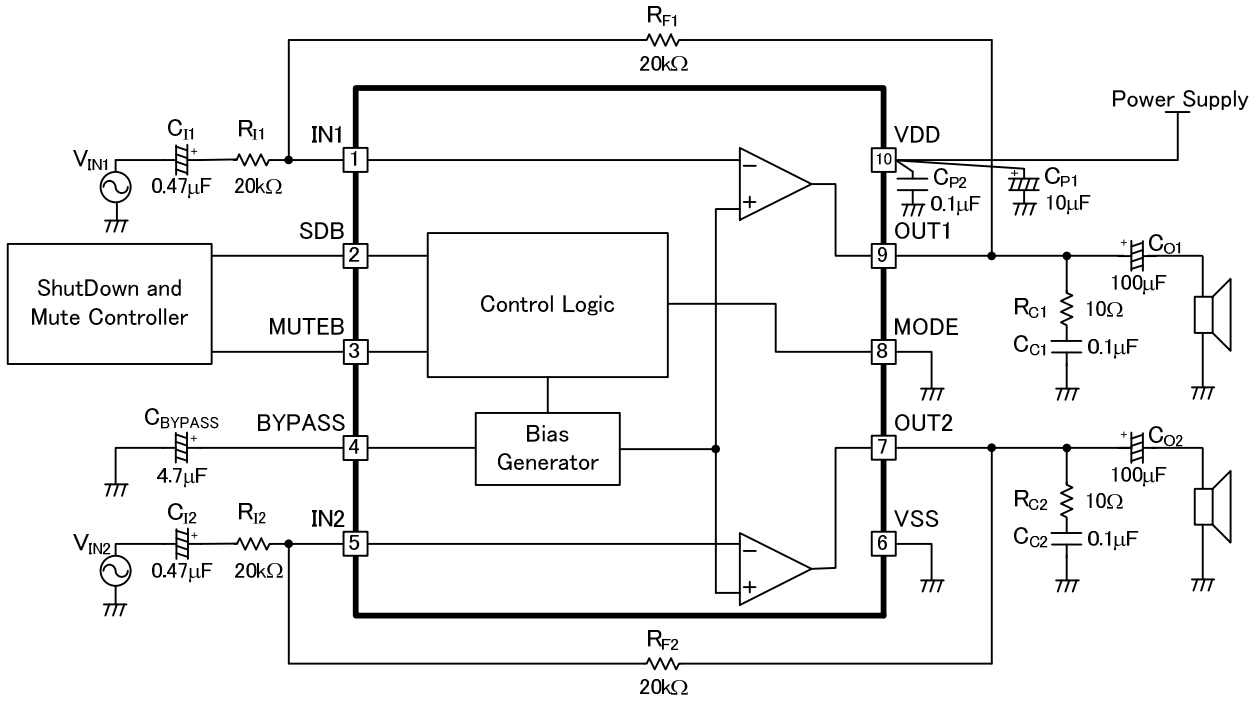
●Application Circuit



・Resistors R_{F1}, R_{F2} should be used in 20kΩ～1MΩ range.
・For gain setting greater than 4 times, then R_{C1}, R_{C2}, C_{C1}, C_{C2} can be eliminated.

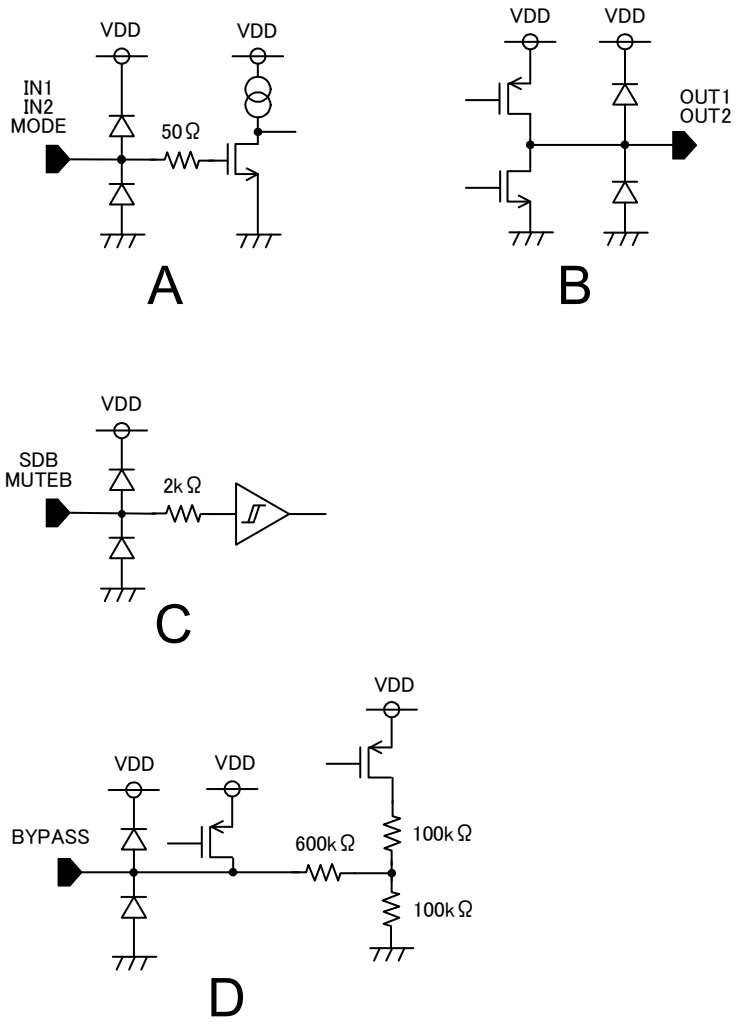

Fig.36 I/O equal circuit

●Functional descriptions

[Timing Chart]

BU7150NUV can control many mode states. “Active” is normal operation state for output signal. “Shutdown” is IC power down state for low power. “Mute” is Headphone amplifier power down state for low power and fast turn-on, because keeping BIAS voltage = VDD/2. “Turn on” and “Turn off” are sweep state.

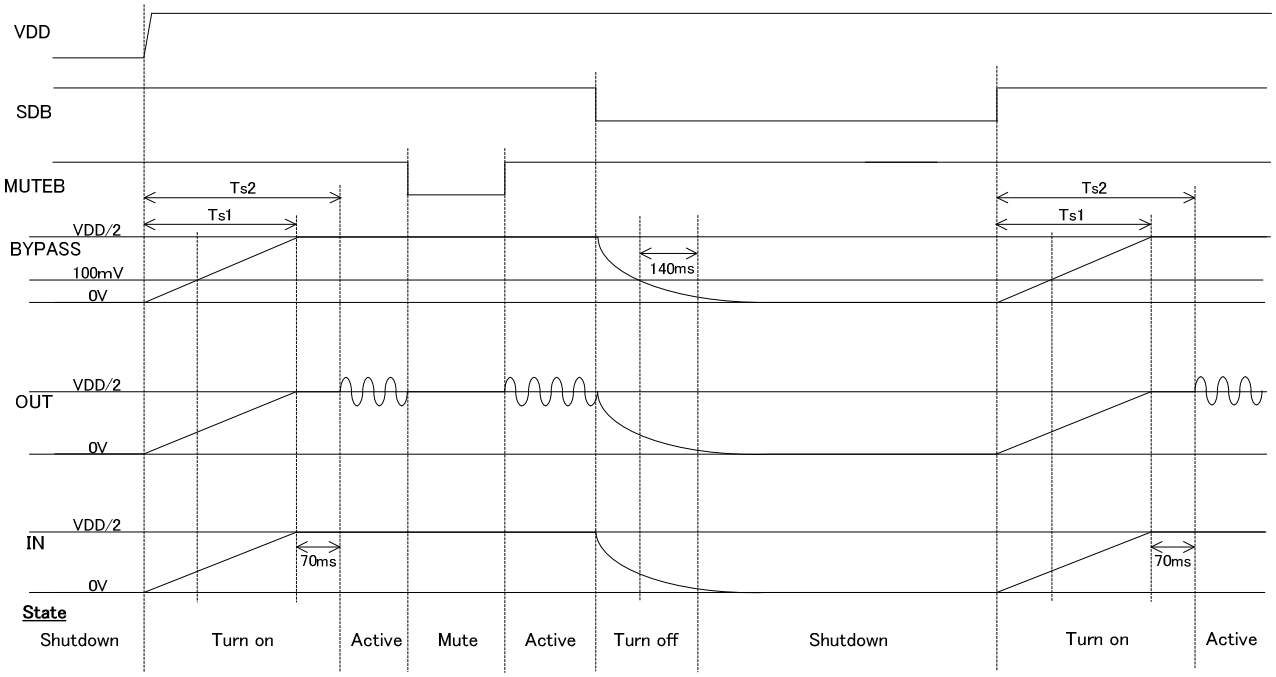

Fig. 37 Timing Chart (MODE = VSS: Single-ended mode)

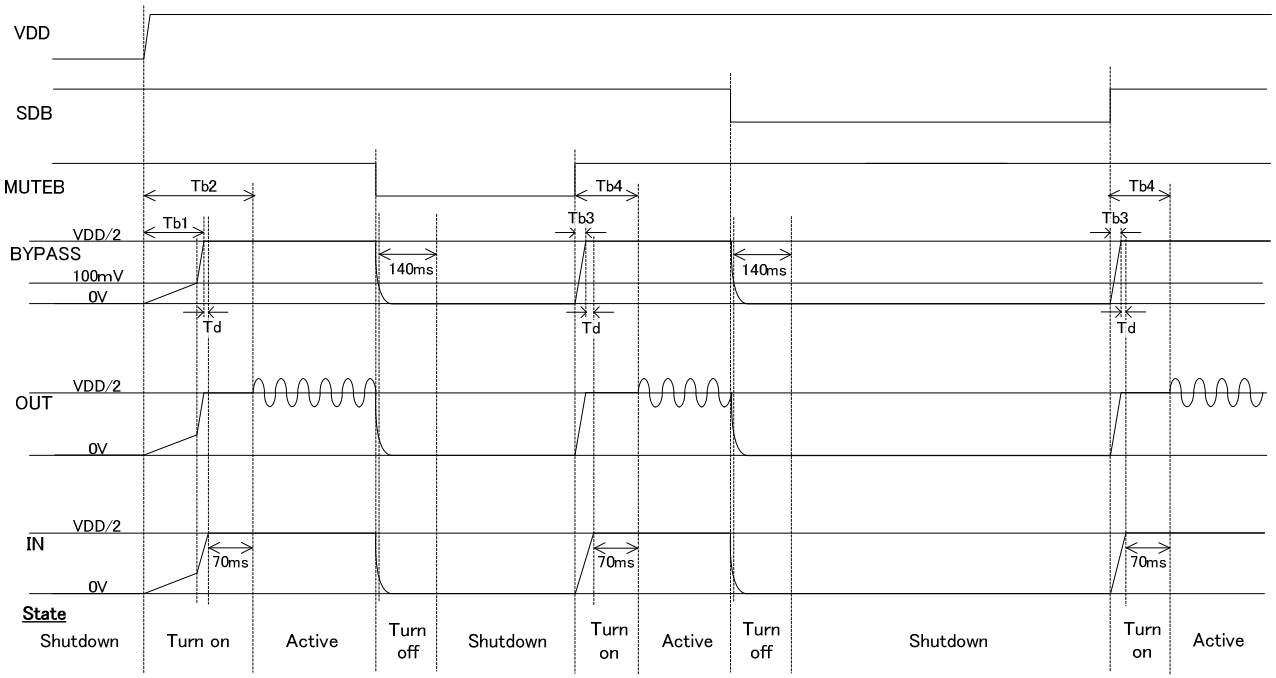

Fig. 38 Timing Chart (MODE = VDD: BTL- mode)

Also, BU7150NUV has wait time for reduction of pop-sound at turn-on and turn-off. Turn-on wait time is 70msec from IN1 voltage = VDD/2. Turn-off wait time is 140msec from BYPASS voltage = 100mV. Please don't change SDB, MUTEB condition at 70msec and 140msec wait- time.

[About Time until Signal Output]

BU7150NUV need wait-time for BIAS charge sweep time and pop-noise reduction.
In the Fig. 37, Ts1 is BIAS charge sweep time from power on or SDB=H. Ts2 is time until signal output from power on or SDB=H. Also, in the Fig. 38, Tb1 is BIAS charge sweep time from power on. Tb2 is time until signal output from power on. Tb3 is BIAS charge sweep time from SDB=H. Tb4 is time until signal output from SDB=H.
These values are decided equation (1) ~ (6). However, BIAS charge sweep time (Ts1, Tb1, Tb3) have uneven ±50%, and wait-time (70msec) is 40msec ~ 126msec for process parameter distribution. (Ta=25°C)

$$Ts1 = \frac{VDD \times C_{BYPASS}}{2.5 \times 10^{-6}} [sec] \quad \cdots \quad (1)$$

$$Ts2 = Ts1 + 0.07[sec] \quad \cdot \cdot \cdot (2)$$

$$Tb1 = \frac{(VDD + 2) \times C_{BYPASS}}{27.5 \times 10^{-6}} [sec] \quad \cdots \quad (3)$$

$$Tb2 = Tb1 + 0.07[sec] \quad \cdot \cdot \cdot (4)$$

$$Tb3 = \frac{VDD \times C_{BYPASS}}{27.5 \times 10^{-6}} [sec] \quad \cdots \quad (5)$$

$$Tb4 = Tb3 + 0.07[sec] \quad \cdot \cdot \cdot (6)$$

In the Fig. 38, Tb1 and Tb3 is differ value, because BU7150NUV's default is single-ended mode. BU7150NUV need BYPASS>100mV to recognize for BTL mode.
Also, Td is delay time to C_{I1}=VDD/2 from BYPASS=VDD/2. Td is decided by C_{I1}, R_{I1}, and R_{F1}.

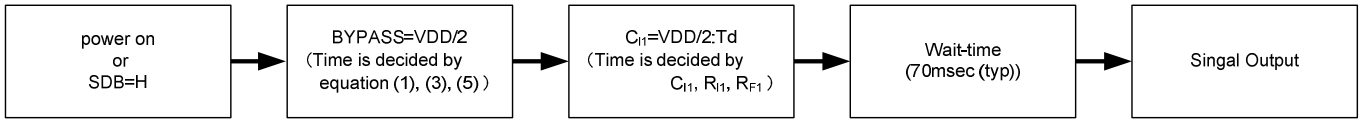

Fig. 39 Flow of Time until Signal Output

[Operation mode]

・Selecting operation mode

BU7150NUV has two OPAMP in the IC (Fig. 1). BU7150NUV is selected for BTL-mode for mono speaker and single-ended mode for stereo headphone operation. Mode is composed of external parts and internal control (Fig. 34, 35) BU7150NUV operates at single-ended mode when MODE pin (pin8) = 0V turn on. BTL mode is operated when MODE pin (pin8) = VDD turn on. BYPASS voltage = 100mV then operation mode is decided by internal comparator by detecting MODE voltage.

The difference between Single-ended mode and BTL-mode is mentioned in the following table.

Parameter	Single ended mode MODE='VSS'	BTL mode MODE='VDD'
Mute function	enable	disenable
Bypass voltage turn on time [Ts1, Tb1, Tb3] (C_{BYPASS}=4.7µF)	Ts1=2.82sec	Tb1=598msec Tb3=256msec
Time until Signal Output [Ts2, Tb2, Tb4](C_{BYPASS}=4.7µF)	Ts2=2.89sec	Tb1=668msec Tb3=326msec
Maximum Output Power (THD=1%)	14mW	85mW
Total Harmonic Distortion + Noise	0.10%	0.20%
Power Supply Rejection Ratio	66dB	62dB

(Ta=25℃, VDD=1.5V, f=1kHz)

・Single-Ended mode

Single-ended mode can be use for stereo headphone amplifier using two internal amplifiers. BU7150NUV can select amplifier gain A_v using external parts. (Fig. 34) Two amplifiers gain A_v is decided by input resistance R_{I1}, R_{I2} and feedback resistance R_{F1}, R_{F2} aspect. Also, Please, use R_{F1}, R_{F2} value in the range 20kΩ~1MΩ.

$$A_V = -\frac{R_F}{R_I}$$

Amplifier outputs (OUT1, OUT2) need coupling capacitors in single-ended mode operation. Coupling capacitors reduce DC-voltage at the output and to pass the audio signal.
Single-ended mode has mute mode. Mute mode reduces pop noise and low power (typ. 15μA・when MUTEB pin = Low. Rise time is high-speed though current consumption increases more than the state of the shutdown so that the state of the mute may keep the output level at the bias level. Mute level is decided by input resistance R_{I1}, R_{I2} and feedback resistance R_{F1}, R_{F2} and R_L

$$\text{Mute level [dB]} = 20\text{Log}\frac{R_L}{R_I + R_F}$$

BU7150NUV needs phase-compensation circuit using external parts. (Fig. 34) But, for amplifier gain Av > 4 then phase compensation circuit may be eliminated.

・BTL mode

BTL mode can be used for mono speaker amplifier using two internal amplifiers. BU7150NUV can select amplifier gain A_v using external parts. (Fig. 35) 1st stage gain is decided by selecting external parts. But 2nd stage gain = 1. 1st stage output signal and 2nd stage output signal are of same amplitude but phase difference of 180°.
Amplifiers gain A_v is decided by input resistance R_{I1} and feedback resistance R_{F1} aspect. Also, Please, use R_{F1}, R_{F2} value in range of 20kΩ~1MΩ.

$$A_V = 2 * \frac{R_{F1}}{R_{I1}}$$

BU7150NUV has no output pop noise at BTL mode operation, because output coupling capacitor is not charged. Therefore, BTL mode is faster by 11 times compared to single-ended mode. SDB pin and MUTEB pin are same function in BTL mode operation.

[About Maximum Output Power]

Maximum output power of audio amplifier is reduced line impedance. Please, design to provide low impedance for the wiring between the power source and VDD pin of BU7150NUV. Also, please design to provide low impedance for the wiring between the GND and VSS pin of BU7150NUV.

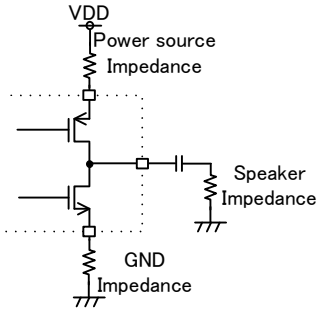

Fig. 40 Line Impedance

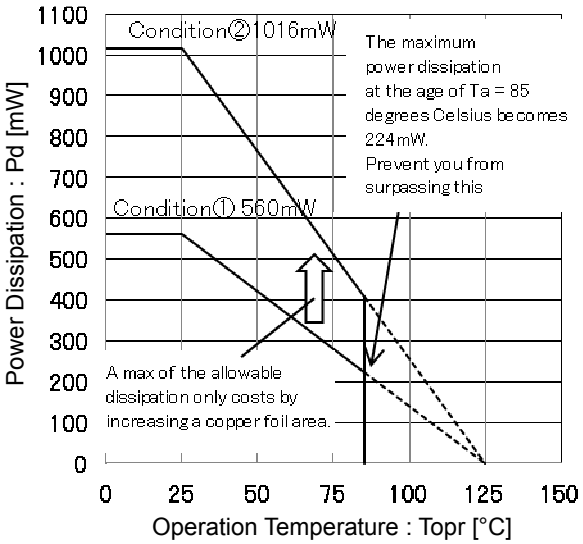
[About a thermal PAD]

This product has a thermal PAD at the rear side of the package for heat dissipation and connecting it to GND plane will provide better heat dissipation. In the event that the IC will exceed its allowable heat dissipation, connect the thermal PAD to GND plane. Furthermore, heat dissipation properties can be improved by increasing the copper foil area of the printed board, which can also provide high allowable dissipation. Additionally, exceeding the allowable dissipation will lead to deterioration of the IC.

Please handle the thermal PAD according to the list shown below by a setting mode and supply voltage.

Setting		Allowable Dissipation	Handling of Thermal PAD
SE mode (R_L=16Ω)		I do not exceed it	It is open or is connected to the GND pattern (Note 3)
SE mode (R_L=8Ω)	V_{DD} < 2.9V		
	V_{DD} ≥ 2.9V	Exceed	I am connected to the GND pattern (Note 3) (I allow even opening by a condition. Reference Figure42)

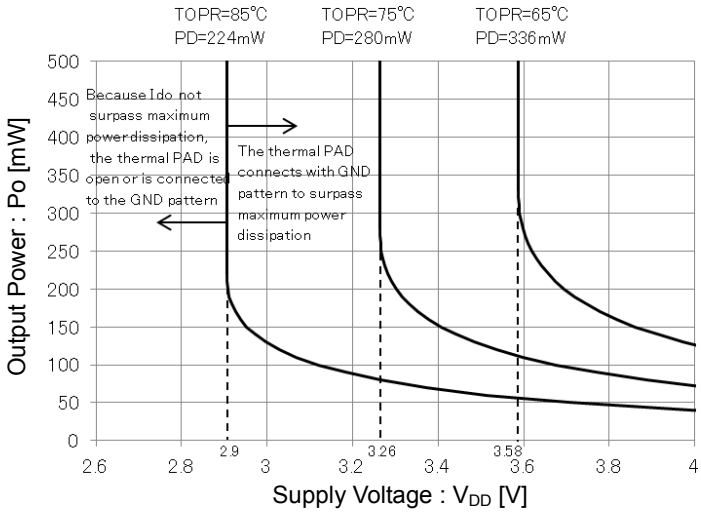
Note 3 Thermal PAD is not a GND terminal. Please give the GND electric potential from VSS terminal (6pin).



Condition 1: When mounted on 1-layer 74.2 mm x 74.2 mm x 1.6 mm glass-epoxy PCB
No copper foil (only mounting pattern)

Condition 2: When mounted on 4-layer 74.2 mm x 74.2 mm x 1.6 mm glass-epoxy PCB6.28mm^2 copper foil (back layer) and 5,505mm^2 copper foil (layers 2 & 3)

Figure 41. Power Dissipation vs Temperature



When mounted on 1-layer 74.2 mm x 74.2 mm x 1.6 mm glass-epoxy PCB
No copper heat sink (only mounting pattern)

Figure 42. Handling of Thermal PAD Condition (BTL Mode)

[How to select external parts for application]

・Power supply capacitor

Power supply capacitor is important for low noise and rejection of alternating current. Please use 10μF electrolytic or tantalum capacitor for low frequency and 0.1μF ceramic capacitor for high frequency nearer to BU7150NUV.

・BYPASS pin capacitor

BU7150NUV sweeps “Active” state after 70msec wait time after IN1 voltage = VDD/2. IN1 voltage are subordinated BYPASS voltage Ts. BYPASS voltage is subordinated BYPASS pin capacitor C_{BYPASS}. Therefore, High speed turn on time is possible if C_{BYPASS} is small value. But, pop noise may occur during turn on time. Therefore, C_{BYPASS} need to be selected best value for application.

●**Notes for use**

(1) Absolute Maximum Ratings
An excess in the absolute maximum ratings, such as supply voltage, temperature range of operating conditions, etc., can break down devices, thus making impossible to identify breaking mode such as a short circuit or an open circuit. If any special mode exceeding the absolute maximum ratings is assumed, consideration should be given to take physical safety measures including the use of fuses, etc.

(2) Operating conditions
These conditions represent a range within which characteristics can be provided approximately as expected. The electrical characteristics are guaranteed under the conditions of each parameter.

(3) Reverse connection of power supply connector
The reverse connection of power supply connector can break down ICs. Take protective measures against the breakdown due to the reverse connection, such as mounting an external diode between the power supply and the IC's power supply terminal.

(4) Power supply line
Design PCB pattern to provide low impedance for the wiring between the power supply and the GND lines. In this regard, for the digital block power supply and the analog block power supply, even though these power supplies has the same level of potential, separate the power supply pattern for the digital block from that for the analog block, thus suppressing the diffraction of digital noises to the analog block power supply resulting from impedance common to the wiring patterns. For the GND line, give consideration to design the patterns in a similar manner.
Furthermore, for all power supply terminals to ICs, mount a capacitor between the power supply and the GND terminal. At the same time, in order to use an electrolytic capacitor, thoroughly check to be sure the characteristics of the capacitor to be used present no problem including the occurrence of capacity dropout at a low temperature, thus determining the constant.

(5) GND voltage
Make setting of the potential of the GND terminal so that it will be maintained at the minimum in any operating state. Furthermore, check to be sure no terminals are at a potential lower than the GND voltage including an actual electric transient.

(6) Short circuit between terminals and erroneous mounting
In order to mount ICs on a set PCB, pay thorough attention to the direction and offset of the ICs. Erroneous mounting can break down the ICs. Furthermore, if a short circuit occurs due to foreign matters entering between terminals or between the terminal and the power supply or the GND terminal, the ICs can break down.

(7) Operation in strong electromagnetic field
Be noted that using ICs in the strong electromagnetic field can malfunction them.

(8) Inspection with set PCB
On the inspection with the set PCB, if a capacitor is connected to a low-impedance IC terminal, the IC can suffer stress. Therefore, be sure to discharge from the set PCB by each process. Furthermore, in order to mount or dismount the set PCB to/from the jig for the inspection process, be sure to turn OFF the power supply and then mount the set PCB to the jig. After the completion of the inspection, be sure to turn OFF the power supply and then dismount it from the jig. In addition, for protection against static electricity, establish a ground for the assembly process and pay thorough attention to the transportation and the storage of the set PCB.

(9) Input terminals
In terms of the construction of IC, parasitic elements are inevitably formed in relation to potential. The operation of the parasitic element can cause interference with circuit operation, thus resulting in a malfunction and then breakdown of the input terminal. Therefore, pay thorough attention not to handle the input terminals, such as to apply to the input terminals a voltage lower than the GND respectively, so that any parasitic element will operate. Furthermore, do not apply a voltage to the input terminals when no power supply voltage is applied to the IC. In addition, even if the power supply voltage is applied, apply to the input terminals a voltage lower than the power supply voltage or within the guaranteed value of electrical characteristics.

(10) Ground wiring pattern
If small-signal GND and large-current GND are provided, It will be recommended to separate the large-current GND pattern from the small-signal GND pattern and establish a single ground at the reference point of the set PCB so that resistance to the wiring pattern and voltage fluctuations due to a large current will cause no fluctuations in voltages of the small-signal GND. Pay attention not to cause fluctuations in the GND wiring pattern of external parts as well.

(11) External capacitor
In order to use a ceramic capacitor as the external capacitor, determine the constant with consideration given to a degradation in the nominal capacitance due to DC bias and changes in the capacitance due to temperature, etc.

(12) About the rush current
For ICs with more than one power supply, it is possible that rush current may flow instantaneously due to the internal powering sequence and delays. Therefore, give special consideration to power coupling capacitance, power wiring, width of GND wiring, and routing of wiring.

(13) Others
In case of use this LSI, please peruse some other detail documents, we called ,Technical note, Functional description, Application note.

Notice

Precaution on using ROHM Products

1. Our Products are designed and manufactured for application in ordinary electronic equipments (such as AV equipment, OA equipment, telecommunication equipment, home electronic appliances, amusement equipment, etc.). If you intend to use our Products in devices requiring extremely high reliability (such as medical equipment (Note 1), transport equipment, traffic equipment, aircraft/spacecraft, nuclear power controllers, fuel controllers, car equipment including car accessories, safety devices, etc.) and whose malfunction or failure may cause loss of human life, bodily injury or serious damage to property ("Specific Applications"), please consult with the ROHM sales representative in advance. Unless otherwise agreed in writing by ROHM in advance, ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of any ROHM's Products for Specific Applications.

(Note1) Medical Equipment Classification of the Specific Applications

JAPAN	USA	EU	CHINA
CLASSⅢ	CLASSⅢ	CLASSⅡb	CLASSⅢ
CLASSⅣ		CLASSⅢ	

2. ROHM designs and manufactures its Products subject to strict quality control system. However, semiconductor products can fail or malfunction at a certain rate. Please be sure to implement, at your own responsibilities, adequate safety measures including but not limited to fail-safe design against the physical injury, damage to any property, which a failure or malfunction of our Products may cause. The following are examples of safety measures:
   [a] Installation of protection circuits or other protective devices to improve system safety
   [b] Installation of redundant circuits to reduce the impact of single or multiple circuit failure

3. Our Products are designed and manufactured for use under standard conditions and not under any special or extraordinary environments or conditions, as exemplified below. Accordingly, ROHM shall not be in any way responsible or liable for any damages, expenses or losses arising from the use of any ROHM's Products under any special or extraordinary environments or conditions. If you intend to use our Products under any special or extraordinary environments or conditions (as exemplified below), your independent verification and confirmation of product performance, reliability, etc, prior to use, must be necessary:
   [a] Use of our Products in any types of liquid, including water, oils, chemicals, and organic solvents
   [b] Use of our Products outdoors or in places where the Products are exposed to direct sunlight or dust
   [c] Use of our Products in places where the Products are exposed to sea wind or corrosive gases, including Cl_2, H_2S, NH_3, SO_2, and NO_2
   [d] Use of our Products in places where the Products are exposed to static electricity or electromagnetic waves
   [e] Use of our Products in proximity to heat-producing components, plastic cords, or other flammable items
   [f] Sealing or coating our Products with resin or other coating materials
   [g] Use of our Products without cleaning residue of flux (even if you use no-clean type fluxes, cleaning residue of flux is recommended); or Washing our Products by using water or water-soluble cleaning agents for cleaning residue after soldering
   [h] Use of the Products in places subject to dew condensation

4. The Products are not subject to radiation-proof design.

5. Please verify and confirm characteristics of the final or mounted products in using the Products.

6. In particular, if a transient load (a large amount of load applied in a short period of time, such as pulse. is applied, confirmation of performance characteristics after on-board mounting is strongly recommended. Avoid applying power exceeding normal rated power; exceeding the power rating under steady-state loading condition may negatively affect product performance and reliability.

7. De-rate Power Dissipation (Pd) depending on Ambient temperature (Ta). When used in sealed area, confirm the actual ambient temperature.

8. Confirm that operation temperature is within the specified range described in the product specification.

9. ROHM shall not be in any way responsible or liable for failure induced under deviant condition from what is defined in this document.

Precaution for Mounting / Circuit board design

1. When a highly active halogenous (chlorine, bromine, etc.) flux is used, the residue of flux may negatively affect product performance and reliability.

2. In principle, the reflow soldering method must be used on a surface-mount products, the flow soldering method must be used on a through hole mount products. If the flow soldering method is preferred on a surface-mount products, please consult with the ROHM representative in advance.

For details, please refer to ROHM Mounting specification

Precautions Regarding Application Examples and External Circuits

1. If change is made to the constant of an external circuit, please allow a sufficient margin considering variations of the characteristics of the Products and external components, including transient characteristics, as well as static characteristics.

2. You agree that application notes, reference designs, and associated data and information contained in this document are presented only as guidance for Products use. Therefore, in case you use such information, you are solely responsible for it and you must exercise your own independent verification and judgment in the use of such information contained in this document. ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of such information.

Precaution for Electrostatic

This Product is electrostatic sensitive product, which may be damaged due to electrostatic discharge. Please take proper caution in your manufacturing process and storage so that voltage exceeding the Products maximum rating will not be applied to Products. Please take special care under dry condition (e.g. Grounding of human body / equipment / solder iron, isolation from charged objects, setting of Ionizer, friction prevention and temperature / humidity control).

Precaution for Storage / Transportation

1. Product performance and soldered connections may deteriorate if the Products are stored in the places where:
   - [a] the Products are exposed to sea winds or corrosive gases, including Cl2, H2S, NH3, SO2, and NO2
   - [b] the temperature or humidity exceeds those recommended by ROHM
   - [c] the Products are exposed to direct sunshine or condensation
   - [d] the Products are exposed to high Electrostatic

2. Even under ROHM recommended storage condition, solderability of products out of recommended storage time period may be degraded. It is strongly recommended to confirm solderability before using Products of which storage time is exceeding the recommended storage time period.

3. Store / transport cartons in the correct direction, which is indicated on a carton with a symbol. Otherwise bent leads may occur due to excessive stress applied when dropping of a carton.

4. Use Products within the specified time after opening a humidity barrier bag. Baking is required before using Products of which storage time is exceeding the recommended storage time period.

Precaution for Product Label

QR code printed on ROHM Products label is for ROHM's internal use only.

Precaution for Disposition

When disposing Products please dispose them properly using an authorized industry waste company.

Precaution for Foreign Exchange and Foreign Trade act

Since concerned goods might be fallen under listed items of export control prescribed by Foreign exchange and Foreign trade act, please consult with ROHM in case of export.

Precaution Regarding Intellectual Property Rights

1. All information and data including but not limited to application example contained in this document is for reference only. ROHM does not warrant that foregoing information or data will not infringe any intellectual property rights or any other rights of any third party regarding such information or data.

2. ROHM shall not have any obligations where the claims, actions or demands arising from the combination of the Products with other articles such as components, circuits, systems or external equipment (including software).

3. No license, expressly or implied, is granted hereby under any intellectual property rights or other rights of ROHM or any third parties with respect to the Products or the information contained in this document. Provided, however, that ROHM will not assert its intellectual property rights or other rights against you or your customers to the extent necessary to manufacture or sell products containing the Products, subject to the terms and conditions herein.

Other Precaution

1. This document may not be reprinted or reproduced, in whole or in part, without prior written consent of ROHM.

2. The Products may not be disassembled, converted, modified, reproduced or otherwise changed without prior written consent of ROHM.

3. In no event shall you use in any way whatsoever the Products and the related technical information contained in the Products or this document for any military purposes, including but not limited to, the development of mass-destruction weapons.

4. The proper names of companies or products described in this document are trademarks or registered trademarks of ROHM, its affiliated companies or third parties.

General Precaution

1. Before you use our Products, you are requested to carefully read this document and fully understand its contents. ROHM shall not be in any way responsible or liable for failure, malfunction or accident arising from the use of any ROHM's Products against warning, caution or note contained in this document.

2. All information contained in this document is current as of the issuing date and subject to change without any prior notice. Before purchasing or using ROHM's Products, please confirm the latest information with a ROHM sales representative.

3. The information contained in this document is provided on an "as is" basis and ROHM does not warrant that all information contained in this document is accurate and/or error-free. ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties resulting from inaccuracy or errors of or concerning such information.
