[Check Availability](#) ⓘ

- Ideal for ensuring safety when multiple workers enter and work in hazardous areas.
- When the plate key or plug is removed, a padlock cover can be placed over it and locked with up to two padlocks.
- Each worker locks with their own padlock (for three or more people, use a commercially available hasp in combination) to prevent accidents where someone is left inside the hazardous area.*Safety assurance by padlocks depends on work rules. If work rules, such as locking the padlocks, are not followed, safety cannot be guaranteed.
