## FXP14R Hexa-Band Cellular Antenna

**Part No:**  
FXP14R.A.07.0100A

### Description

AntD© Shunt 10k Ohm Chip Resistor Inside  
850/900/1700/1800/1900/2100MHz  
100mm, Ø1.13 cable, I-PEX MHF® I (U.FL comp)  
Dims: 70\*20\*0.1mm

### Features:

IPEX MHF Connector (U.FL compatible)  
100 mm 1.37 Cable  
70\*20\*.01 mm  
Flexible  
Peel and Stick Mounting  
AntD© Shunt 10k Ohm Chip Resistor Inside  
Cable and Connector Customizable  
RoHS compliant

# 1. Introduction

The Taoglas FXP14R Hexa Band Cellular Antenna with Integrated AntD© Resistor covers all world-wide 2G/3G bands (850 / 900 / 1700 / 1800 / 1900 / 2100 MHz). Common applications are in GSM / CDMA / DCS / PCS / WCDMA / UMTS/ HSPA / GPRS / EDGE.

The antenna has been designed using a super thin flexible polymer substrate with a rectangular form-factor and cable connection for ease of installation. The antenna radiates well on different plastic materials and thickness. We have selected ABS plastic mounting with 2 mm of thickness as a baseline for testing. Best in class efficiency on lower and upper bands (above 40%) make it an ideal antenna for devices where space for onboard SMT cellular antennas is not available. The antenna is mounted via automotive quality 3M 467MP adhesive and has excellent reliability. The FXP14 has its own ground-plane, therefore it does not need to connect to the ground-plane of the main-board of the device for improved radiation efficiency.

Taoglas unique AntD© technology allows connected radio products to perform diagnostics on the antenna. This includes detection that the proper antenna is connected and that the connection isn't shorted or broken. Contact Taoglas engineering for examples on how to implement AntD© antenna diagnostics in your product. Cable length and connector types are also customizable. Like all such antennas, care should be taken to mount the antenna at least 10mm from metal components or surfaces, and ideally 20mm for best radiation efficiency.
